ACLS N/A

Buy	$162.93 ▲ 2.35%	12M Price Target **$180.00**	52-Week Range $59.99 – $171.61	Market Cap $5.01B

ACLS: Golden Cross + Momentum; Reiterate Buy on Ion Implant Cycle Recovery

WHAT'S CHANGED

- ACLS +2.35% to $162.93 on 599K shares (~40% above 5-day avg), extending a +8.3% five-session move from $150.41 (5/29) and confirming the Golden Cross flagged by Zacks (6/03).
- Stock now sits at 92% of 52-week range ($59.99–$171.61); options P/C of 0.93 is neutral, but a VP sold 2,000 shares (6/02) — modest, not a cluster signal.

IMPLICATIONS

The technical breakout and golden cross arrive as semicap sentiment improves alongside narratives around memory recovery and SiC power device normalization — ACLS's two core end-market drivers. With no SEC filings or guidance changes, the move is sentiment- and flow-driven, suggesting positioning ahead of mid-cycle implant orders rather than a fundamental re-rate. The Micron comp coverage (5/26) reinforces ACLS's identity as a high-beta semicap proxy, meaning further upside likely requires confirmation from peer order commentary (AMAT, LRCX) and SiC demand stabilization at WolfSpeed/onsemi.

VALUATION

At $162.93 / ~$5.0B market cap, ACLS trades at ~5.7x FY26E revenue and ~33x FY26E EPS (~$4.85), in-line with the WFE peer group despite still-depressed SiC mix. Our $180 PT implies ~10% upside on a 28x FY27E EPS of ~$6.40, supported by gross margin recovery to 43%+ as Purion XEUV and high-current mix rebuilds. Multiple expansion driver: SiC power device order resumption in 2H26; contraction risk if China implant revenue (~40% of mix) normalizes lower.

KEY RISKS

- China revenue concentration (~40%+ of recent mix) exposed to export controls and indigenous tool substitution.
- SiC capacity digestion at customers (WolfSpeed, onsemi, STM) extends implant order trough into 2027.
- Share loss risk to Applied Materials Varian in high-current implant at leading-edge logic nodes.

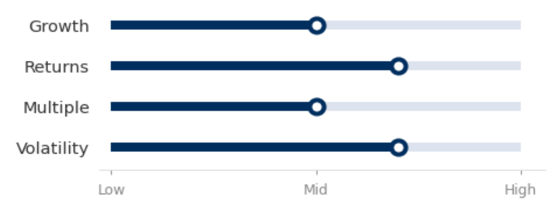
INVESTMENT PROFILE



12-MONTH PRICE PERFORMANCE VS. S&P; 500

ACLS — ACLS | June 04, 2026

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	**$175.00**	$165.00	**$148.00**
6 Months	**$195.00**	$175.00	**$135.00**
1 Year	**$220.00**	$180.00	**$120.00**
2 Years	**$270.00**	$210.00	**$110.00**
5 Years	**$380.00**	$280.00	**$130.00**
10 Years	**$600.00**	$420.00	**$180.00**

SECTOR INTELLIGENCE

HOT SECTORS: Healthcare (+3.0%), Financials (+2.63%)

COLD SECTORS: Comm. Svcs (-3.21% 5D), Utilities (-1.51% 5D)

ROTATION WATCH: Risk-on tone in cyclicals (Financials, Industrials +1.17%) is constructive for semicap equipment, which behaves as a high-beta industrial-tech hybrid; rotation into rate-sensitive growth could extend the ACLS move if 10Y yields stabilize.

BYPRODUCT PLAY: SiC/power device implant recovery benefits ancillary names — Ultra Clean Holdings (UCTT), Ichor (ICHR), and Onto Innovation (ONTO) — as a broader WFE order cycle resumes.

OUTPERFORMERS & PEER CONTEXT

- AMAT (Applied Materials): WFE share leader with diversified leading-edge logic exposure; trades at premium multiple reflecting GAA/advanced packaging tailwinds.
- KLAC (KLA Corp): Process control structural growth at advanced nodes driving sustained 30%+ operating margins, outpacing implant-pure peers.

ACLS CONTEXT: ACLS is now leading the semicap pack on a 5-day basis (+8.3%) after lagging in 2024–early 2025; relative strength suggests the market is finally pricing in implant cycle bottoming, but ACLS still trades at a discount to AMAT/KLAC on EV/EBITDA, leaving room to close the gap if SiC orders confirm.

INVESTMENT STRATEGY

7/10 Conviction Score

Position Size: 2-4% of portfolio

Entry Points: $150-155 on pullbacks; add above $172 breakout

Time Horizon: 12-18 months

Thesis Invalidation: SiC/power demand stalls; FY27 revenue guide cut >10%; loss of share to AMAT Varian

Hedging: Pair long ACLS / short AMAT or SOXX puts to neutralize cycle beta
