52-Week Range $56.19 – $171.61

Market Cap $4.62B

ACLS: Reiterate Buy as Shares Consolidate Near 52-Wk Highs

WHAT'S CHANGED

- ACLS closed flat at $150.42 after a sharp -8.4% five-day pullback from $164.27 (5/26), with volume normalizing to 408K — profit-taking from 82% of 52-wk range rather than fundamental break.
- Simply Wall St. valuation re-rate note (6/01 06:12) follows the 5/08 Q1 print; near-term options flow is decisively bullish (P/C 0.06, 2,255 calls vs. 142 puts) signaling positioning for rebound.

IMPLICATIONS

The 8% drawdown into a +2.48% Tech tape on 6/01 marks notable relative underperformance, suggesting idiosyncratic profit-taking after the rally to $171 rather than sector rotation away from semicap. With Tech +8.52% over five days and bullish options skew, ACLS is positioned as a high-beta way to play the power/memory implant capex thaw, but execution on SiC ramp guidance from the Q1 call remains the swing factor. The lack of insider selling and concentrated institutional ownership (Blackrock 16.1%, Vanguard 8.1%, FMR 7.9%) limits downside structural pressure.

VALUATION

At $150.42 and ~$4.62B market cap, ACLS trades at roughly 6.1x EV/sales on FY26E ~$760M and ~22.5x EV/EBITDA — a discount to AMAT/LRCX but a premium to historical mid-cycle troughs. Our $175 PT implies ~16% upside on ~45x FY26E EPS of $3.85, justified by leverage to a 2H26 power-device order recovery. Multiple expansion driver: SiC implant share gains; contraction risk: prolonged China memory pause.

KEY RISKS

- SiC/power-device capex digestion at key Chinese and Korean customers extending into FY27.
- Export-control tightening on advanced implant tools to China (historically >40% of mix).
- Memory implant cyclical lag if HBM/DRAM capex shifts toward litho/deposition over implant intensity.

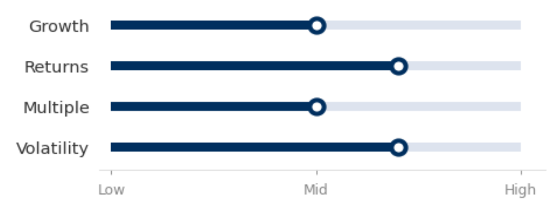
INVESTMENT PROFILE



12-MONTH PRICE PERFORMANCE VS. S&P; 500

ACLS — ACLS | June 01, 2026

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	$168.00	$155.00	$138.00
6 Months	$190.00	$170.00	$130.00
1 Year	$215.00	$175.00	$120.00
2 Years	$260.00	$200.00	$110.00
5 Years	$360.00	$260.00	$140.00
10 Years	$550.00	$380.00	$180.00

SECTOR INTELLIGENCE

HOT SECTORS: Technology (+8.52% 5D), Energy (+1.79% 1D)

COLD SECTORS: Financials (-0.98% 5D), Industrials (flat)

ROTATION WATCH: Strong Tech leadership with broad semicap participation suggests continued rotation into capital equipment names as AI-driven fab buildouts and a memory upcycle converge through 2H26.

BYPRODUCT PLAY: SiC and GaN power device adoption in EVs and grid infrastructure creates secondary demand for implant tools where ACLS holds dominant share — Coherent (COHR) and onsemi (ON) are upstream tells.

OUTPERFORMERS & PEER CONTEXT

- KLIC (Kulicke & Soffa): Zacks (5/19) highlights multiple growth drivers — advanced packaging exposure benefiting from HBM ramp.
- VECO (Veeco Instruments): Sustained coverage as power/compound semi tool play with similar SiC leverage to ACLS.

ACLS CONTEXT: ACLS is lagging the broad Tech ETF over the past week (-8% vs. +8.52% sector) but remains at 82% of its 52-week range — relative weakness is profit-taking off highs, not a thesis breakdown. Peer comparisons (Micron, KLIC, VECO) being aggregated in financial press reinforces ACLS's "best small-cap semicap" framing.

INVESTMENT STRATEGY

7/10 Conviction Score

Position Size: 3-4% of portfolio

Entry Points: $145-150 on consolidation; add below $140

Time Horizon: 12-18 months

Thesis Invalidation: SiC capex digestion extends >2 quarters or memory implant share loss

Hedging: Pair short vs. AMAT or LRCX on relative basis
