MRVL: Bounces After Brutal Selloff, India Bet Signals Global Ambition

WHAT HAPPENED

- MRVL ripped +11.7% today, but here's the real story: the stock got obliterated Monday and Tuesday (down from $194 to $163 — that's ~16% in two days) on no company-specific news. Today's bounce is technical — dip buyers stepping in after tech ETF rallied +5.6%. Volume today (9.3M) is way below yesterday's panic selling (25.5M), which tells me this bounce needs more fuel to stick.
- Marvell announced a $250M India investment and plans to double headcount there. This is a big deal — it's a hedge against China exposure and taps into cheaper engineering talent for their custom AI chip (ASIC) design work.

WHY IT MATTERS

The two-day selloff followed by today's snap-back tells me MRVL has become a high-beta proxy for AI sentiment — meaning it moves 2-3x whatever Nvidia does. That's a double-edged sword: when AI enthusiasm returns, this rips harder than NVDA, but it also means MRVL gets punished for things that have nothing to do with its business. The India expansion matters more than people realize — it's a direct response to the Trump administration's push to diversify semiconductor supply chains AWAY from China and Taiwan, and India has emerged as the favored alternative. Watch for this: if Congress extends or expands the CHIPS Act with a "friend-shoring" component (favoring India, Vietnam, Mexico), Marvell just positioned itself perfectly to grab those subsidies.

POLICY & POLITICAL WATCH

The big one to watch: export controls on advanced chips to China. The Commerce Department is reportedly reviewing whether custom ASICs (Marvell's bread and butter) should be pulled into the same restriction bucket as Nvidia's H20 chips — if that happens, it hits Marvell's China revenue directly. On the positive side, the administration's "Made in America" semiconductor push and the pending AI infrastructure spending in the reconciliation bill both favor domestic chip designers like MRVL. Also watch the India-US trade framework talks — Marvell's $250M investment is essentially a bet that India gets favored-nation treatment on semiconductors.

IS IT EXPENSIVE?

At $182, MRVL trades around 64x forward earnings — meaning investors are paying $64 today for every $1 the company is expected to earn next year. That's expensive on paper, but the AI silicon peer group (AVGO, NVDA) trades in similar territory. The justification: if custom AI chip revenue grows the way management guided (roughly doubling), earnings catch up fast and the multiple compresses naturally. But if AI capex spending from hyperscalers (Amazon, Google, Microsoft) slows even a little, this multiple is the first thing that gets cut.

Key Data

Price (USD)	**$182.52**
12M Price Target	**$210.00**
Upside / (Downside)	**+15.1%**
Market Cap	**$163.82B**
FY2027E Revenue	**$8,200M**
FY2028E Revenue	**$10,400M**
FY2027E EPS	**$2.85**
FY2028E EPS	**$3.90**
Fwd P/E	**64.0x**

MRVL — Marvell Technology, Inc. | July 30, 2026

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	**$210.00**	$190.00	**$160.00**
6 Months	**$250.00**	$210.00	**$150.00**
1 Year	**$290.00**	$230.00	**$140.00**
2 Years	**$350.00**	$270.00	**$130.00**
5 Years	**$500.00**	$350.00	**$150.00**
10 Years	**$800.00**	$500.00	**$180.00**

WHAT'S MOVING IN THE SECTOR

HEATING UP: Technology (+5.6% today) is heating up hard — this looks like a reflex rally after last week's AI-bubble anxiety selloff. The trigger appears to be Teradyne's (TER) earnings beat where the CEO said AI demand is "robust" and extending into 2027 — that's exactly what nervous AI investors needed to hear.

COOLING OFF: Utilities, Financials, and Materials all red. Money is leaving defensive/rate-sensitive names to chase the AI trade again.

ROTATION WATCH: Classic risk-on rotation back into growth/AI after a week of profit-taking. If TER-style "AI demand is fine" commentary continues through earnings season, expect this rotation to accelerate.

RELATED PLAY: If you believe the AI infrastructure story, the picks-and-shovels names benefit alongside MRVL — think Astera Labs (ALAB) for connectivity, or Vertiv (VRT) for data center power/cooling.

WHO'S WINNING IN THIS SPACE?

- NVDA (Nvidia): Still the AI benchmark — every positive AI datapoint flows through NVDA first, then to MRVL and AVGO.
- TER (Teradyne): Popped on Q2 beat and bullish 2027 AI commentary — provided the spark for today's semi rally.
- AVGO (Broadcom): Marvell's biggest custom-ASIC competitor and the tell for how the whole sub-sector is trading.

MRVL CONTEXT: MRVL is LAGGING slightly — trading at 45% of its 52-week range (with a high of $329 back when AI euphoria peaked). That's actually where the opportunity is. If AI sentiment fully re-rates, MRVL has more room to run than NVDA, which is closer to its highs.

WHAT I'D DO WITH THIS STOCK

7/10 Conviction Score

Position Size: 3-5% of portfolio

Entry Points: $160-175 on pullbacks

Time Horizon: 12-24 months

Thesis Invalidation: Loss of Amazon Trainium/Google Axion custom silicon deals, or China export controls widen to include Marvell's ASIC business

Hedging: Pair with a short on a pure-play AI name at richer multiple, or buy protective puts on rallies
