MRVL: AI Connectivity Story Reignites, Photonics Next Leg

WHAT HAPPENED

- MRVL ripped +7% Friday on no company-specific news — this is a sentiment trade. The GuruFocus piece flagging photonics (next-gen optical chips that move data with light instead of electricity — critical for AI data centers) as the next growth leg gave bulls a fresh narrative, and options flow tells you big money front-ran it.
- The bigger tell: Insider Monkey noted "AI connectivity stocks jumped 7%+ while Nvidia barely moved." That's rotation — investors are hunting for the second-derivative AI plays that haven't run as hard as NVDA, and MRVL fits the bill sitting 32% below its 52-week high.

WHY IT MATTERS

The setup here is that MRVL is being re-rated as an AI infrastructure name rather than a legacy chip company — and the market is finally waking up to the fact that every AI data center needs Marvell's optical DSPs and custom ASICs to actually function. The unusual call buying (put/call ratio of 0.50 is aggressively bullish, meaning traders are buying 2 calls for every put) tells you smart money expects more upside into the next earnings print. What this probably means: the narrative shift from "Broadcom is winning, Marvell is losing" (see that Barrons-adjacent piece from 24/7 Wall St.) to "there's room for both" is happening in real time, and MRVL has more room to run because it started from a lower base. Watch for: any hyperscaler capex guidance updates from Amazon, Microsoft, or Google — MRVL's custom silicon business is directly tied to those budgets.

POLICY & POLITICAL WATCH

The CHIPS Act 2.0 discussions in Congress and the Trump administration's push for domestic semiconductor manufacturing are net-positive for MRVL — they design in the US and can benefit from federal incentives without the fab-building capex burden Intel is drowning in. The bigger swing factor is China export controls: tighter restrictions on advanced AI chips going to China actually help Marvell because they force hyperscalers to build more capacity domestically, which means more custom silicon orders. Watch the ongoing debate on Section 301 tariff extensions on Chinese semiconductors — if broadened, MRVL's competitive moat widens; if narrowed as part of a trade deal, some pricing power evaporates.

IS IT EXPENSIVE?

Key Data	
Price (USD)	**$223.55**
12M Price Target	**$260.00**
Upside / (Downside)	**+16.3%**

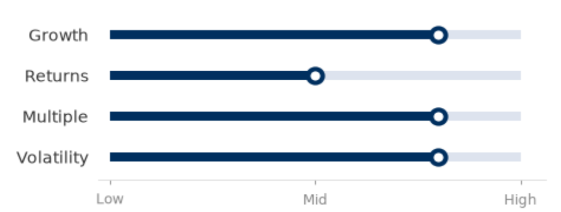
FY2026E Revenue	**$8,200M**
FY2027E Revenue	**$10,400M**
FY2026E EPS	**$2.15**
FY2027E EPS	**$3.05**
Fwd P/E	**104.0x**

INVESTMENT PROFILE



12-MONTH PRICE PERFORMANCE VS. S&P; 500

MRVL — Marvell Technology, Inc. | September 07, 2026

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	**$245.00**	$230.00	**$200.00**
6 Months	**$285.00**	$250.00	**$180.00**
1 Year	**$330.00**	$260.00	**$170.00**
2 Years	**$420.00**	$310.00	**$160.00**
5 Years	**$600.00**	$400.00	**$180.00**
10 Years	**$900.00**	$550.00	**$200.00**

WHAT'S MOVING IN THE SECTOR

HEATING UP: Tech (+0.70% today, leading all sectors) — AI infrastructure narrative is back on after the summer chop, and money is flowing toward "AI enablers" that aren't NVDA. Utilities quietly up too, which is the AI-power-demand trade.

COOLING OFF: Financials (-0.79%), Real Estate (-1.24% over 5 days) — rate-sensitive stuff getting hit as long yields drift up. Materials weak too, signaling investors don't see a broad industrial reflation.

ROTATION WATCH: Money is clearly rotating from mega-cap AI (NVDA) into second-tier AI infrastructure names — MRVL, AVGO, ANET, CRDO. That's a healthy sign for MRVL because it means the AI trade is broadening, not dying.

RELATED PLAY: If MRVL's photonics story catches fire, watch Coherent (COHR) and Lumentum (LITE) — they make the actual optical components that plug into Marvell's DSPs. Second-order beneficiaries with smaller market caps and bigger torque.

WHO'S WINNING IN THIS SPACE?

- AVGO (Broadcom): Still the benchmark — its custom silicon dominance sets the ceiling for MRVL's story. If AVGO reports strong, MRVL rides the wave.
- CRDO (Credo Technology): Smaller AI connectivity name that's been on fire — proves the market wants exposure to optical/DSP plays beyond just Marvell.
- ANET (Arista Networks): AI networking beneficiary — their strength signals hyperscaler switch/interconnect spending is healthy, which flows directly to MRVL.

MRVL CONTEXT: MRVL is lagging AVGO on a 12-month basis but leading the pack on this recent bounce (up 7% in a day while NVDA barely moved). That "catch-up trade" dynamic suggests more room to run before it looks stretched relative to peers.

WHAT I'D DO WITH THIS STOCK

7/10 **Conviction Score**

Position Size: 3-5% of portfolio

Entry Points: $205-215 on pullbacks

Time Horizon: 12-24 months

Thesis Invalidation: Loss of Amazon Trainium custom silicon deal, or two consecutive quarters of data center revenue deceleration

Hedging: Pair with a short on a richer-multiple AI networking peer, or buy protective puts 10% out of the money
