ACLS: Reiterate Buy as Shares Break 52-Week High on Sector Momentum

WHAT'S CHANGED

- ACLS surged +6.37% to \$191.60 on heavy volume (998K vs ~700K avg), printing a fresh 52-week high and capping a 4-day rally of +21.8% off the 6/10 low of \$157.43.
- Bullish options flow accelerated: P/C ratio of 0.10 with unusual \$200 July call sweep (1,020 contracts, 15.7x OI) signaling positioning for continuation through earnings.

IMPLICATIONS

The Technology ETF's +3.78%/+4.13% (1D/5D) move and the "golden cross" technical signal flagged by Zacks on 6/3 are catalyzing a broader semicap re-rating that disproportionately benefits ACLS given its leverage to power device (SiC/IGBT) implant demand. With shares at 98% of 52-week range and follow-through volume, the tape is pricing in a cyclical trough behind us — consistent with leading-edge memory recovery and resumed mature-node investment in China. Insider sales noted in mid-May/early-June news flow appear digested by the market and are not impeding momentum.

VALUATION

At \$191.60 and ~\$5.89B market cap, ACLS trades at ~7.7x EV/Revenue and ~28.5x EV/EBITDA on FY26E — a premium to its 5-yr median but justified by re-acceleration optionality into FY27. Our \$215 PT implies ~12% upside, derived from 32x FY27E EBITDA, reflecting normalized power-device cycle margins. Multiple compression risk exists if SiC customers (Wolfspeed, onsemi, Infineon) push out capex further; expansion driver is China general-mature share defense.

KEY RISKS

- SiC overcapacity and Wolfspeed/onsemi capex deferrals continue to weigh on Power segment bookings into 2H26.
- China export-control tightening on mature-node implant tools could impair the largest revenue geography.
- Stock is technically extended (98% of 52-wk range); mean-reversion risk into Q2 print is elevated.

10 Years	\$650.00	\$450.00	\$200.00

SECTOR INTELLIGENCE

HOT SECTORS: Technology (+3.78% 1D), Consumer Discretionary (+1.69% 1D)

COLD SECTORS: Utilities, Communication Services

ROTATION WATCH: Capital is rotating into cyclical semis and semicap equipment as the market discounts a 2H26 cycle inflection; AI capex spillover into adjacent power/analog beneficiaries is broadening the rally beyond mega-cap names.

BYPRODUCT PLAY: AI datacenter power density is accelerating GaN/SiC adoption in power conversion — secondary beneficiaries include implant tooling (ACLS), epi (AIXG), and substrate (WOLF) suppliers as the supply chain rebuilds inventory ahead of 2027 capacity adds.

OUTPERFORMERS & PEER CONTEXT

- AMAT (Applied Materials): leading the semicap tape on broad-based foundry/logic strength and HBM packaging exposure.
- LRCX (Lam Research): NAND recovery and dry-EUV resist optionality driving multiple expansion above sector.

ACLS CONTEXT: ACLS is now pulling away from the WFE pack on a 5-day basis (+16% vs Tech ETF +4.13%), reflecting catch-up rerating after 2025 SiC-driven underperformance. Relative strength suggests positioning is rebuilding from underweight.

INVESTMENT STRATEGY

7/10 Conviction Score

Position Size: 2-4% of portfolio

Entry Points: \$170-180 on consolidation pullbacks

Time Horizon: 12-18 months

Thesis Invalidation: SiC capex deferral materially, mature-node implant share loss, or >15% revenue guide-down

Hedging: Pair short against AMAT or LRCX to isolate idiosyncratic alpha
