MRVL: Riding AI Wave Ahead of Nvidia Earnings Verdict

WHAT HAPPENED

- MRVL bounced 4.84% off Monday's dip — this looks like a classic "buy the dip ahead of Nvidia earnings" trade. When Nvidia reports tonight, it sets the mood for every AI-adjacent chip name, and traders are positioning for a good print.
- The narrative also got a boost from that 24/7 Wall St piece on "AI networking stocks dominating a quiet niche" — MRVL is core to that thesis (their custom ASICs and optical networking gear are inside the data centers Nvidia's GPUs sit in).

WHY IT MATTERS

Here's what to actually watch: MRVL trades as a leveraged bet on Nvidia's earnings tonight — if Nvidia guides strong on data center capex (the money hyperscalers like Amazon, Microsoft, Google spend building AI infrastructure), MRVL rips because they sell the networking chips and custom silicon that connect all those GPUs. But if Nvidia disappoints on China revenue or hyperscaler orders, MRVL gets sold harder than Nvidia itself because it's smaller and less liquid. The options flow tells an interesting story — put/call ratio of 0.57 says traders are net bullish (more calls than puts), but that big unusual put at \$242.50 expiring this week looks like someone hedging into earnings. Translation: smart money is long but buying insurance.

POLICY & POLITICAL WATCH

The CHIPS Act tailwind is still very much alive — MRVL benefits from federal subsidies flowing to domestic chip design and manufacturing partners, and any expansion of that program (which both parties are floating for 2026) is a direct positive. The bigger swing factor is China: the Trump administration's export controls on advanced chips have been a headwind (limits what MRVL can sell into China), but any thaw in trade negotiations — or conversely, tighter restrictions — will move the stock. Also watch the proposed AI infrastructure tax credits being debated — if hyperscalers get accelerated depreciation on AI hardware, they buy MORE of MRVL's stuff, faster.

IS IT EXPENSIVE?

At \$240, MRVL trades around 84x forward earnings — meaning investors are paying \$84 today for every \$1 of profit expected next year. That's expensive on paper, but the market is valuing this on the FY27 custom silicon ramp (Amazon Trainium, Microsoft Maia chips) which could push revenue up 25-30%. Compared to Broadcom at ~35x forward earnings, MRVL is pricier — but Broadcom is huge and slower-growing, while MRVL is smaller with a steeper growth curve. Fair, not cheap.

Key Data

Price (USD)	\$240.38
12M Price Target	\$285.00
Upside / (Downside)	+18.6%
Market Cap	\$216.03B
FY2026E Revenue	\$8,200M
FY2027E Revenue	\$10,500M
FY2026E EPS	\$2.85
FY2027E EPS	\$4.10
Fwd P/E	84.3x

INVESTMENT PROFILE

12-MONTH PRICE PERFORMANCE VS. S&P 500

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	\$275.00	\$250.00	\$215.00
6 Months	\$310.00	\$275.00	\$200.00
1 Year	\$350.00	\$285.00	\$190.00
2 Years	\$425.00	\$330.00	\$180.00
5 Years	\$600.00	\$450.00	\$200.00
10 Years	\$900.00	\$650.00	\$250.00

WHAT'S MOVING IN THE SECTOR

HEATING UP: Tech and semiconductors are catching a bid as inflation fears ease — cooler inflation means the Fed has more room to cut rates, which is rocket fuel for growth stocks like MRVL that get valued on far-future earnings.

COOLING OFF: Tech is actually down 2% over 5 days despite today's bounce — the sector has been choppy waiting for Nvidia's verdict on the AI trade.

ROTATION WATCH: Money is rotating INTO tech today on the "inflation easing" narrative, but it's cautious rotation — everyone's waiting for Nvidia. Post-earnings, expect a sharp move in either direction across the whole AI complex.

RELATED PLAY: If MRVL runs, watch the second-derivative plays — Vertiv (VRT) for data center cooling/power, and Astera Labs (ALAB) which competes with MRVL in connectivity. A rising tide lifts all of them.

WHO'S WINNING IN THIS SPACE?

- AVGO (Broadcom): The direct comp — bigger, more profitable, and increasingly winning custom AI silicon deals. The Trefis piece today flagged Broadcom's customer concentration risk, which ironically is bullish for MRVL as a diversification play.
- NVDA (Nvidia): Still the AI kingmaker — whatever it does tonight dictates the tape for MRVL.

MRVL CONTEXT: MRVL is at 67% of its 52-week range (\$61-\$330), meaning it's recovered strongly but hasn't reclaimed highs. It's lagged Broadcom over the past quarter but has more torque to the upside if custom silicon ramps as expected — this is a "coiled spring" setup into their next earnings.

WHAT I'D DO WITH THIS STOCK

7/10 Conviction Score

CONVICTION: 7/10 — I like the setup but Nvidia earnings tonight is a coin flip event that I can't handicap. Post-earnings I'd have higher conviction either way.

POSITION SIZE: 3-5% of portfolio — this is a high-beta AI name (moves more than the market), so keep it sized where a 20% drawdown doesn't ruin your week.

ENTRY POINTS: \$225-235 on any Nvidia-driven pullback. If Nvidia surprises to the upside and MRVL gaps to \$260+, wait for a retest rather than chase.

TIME HORIZON: 12-24 months — the real catalyst is the FY27 custom silicon revenue ramp becoming visible in the numbers over the next 2-3 quarters.

WHEN TO BAIL: If hyperscaler capex guidance turns negative, or if MRVL loses a major custom silicon customer, or if the stock breaks below \$190 on high volume — that would signal the AI trade is materially breaking down.

HEDGING: Simplest hedge — buy a small put option (insurance contract that pays off if the stock falls) expiring after Nvidia earnings. Or pair it with a short position in a pricier AI name so you're betting on MRVL specifically, not just "AI goes up."
