Healthcare	-4.56%	Gold ETF	398.77	-8.0000

WEEKLY MACRO & SECTOR INTELLIGENCE

- Sharp bear-steepening this week: 10Y +19bp to 4.97%, 5Y +24bp to 4.79%, with the belly leading the selloff while 3M bills rose +16bp to 3.91%. Gold's -\$8 drop alongside rising real yields signals the market is pricing out near-term Fed cuts, likely on sticky inflation or hawkish Fed speak. Duration-sensitive equities face a tougher discount-rate backdrop into next week's CPI.
- Technology led (+0.91%) with Energy close behind (+0.80%, +6.73% 1M). Energy's trend has legs given crude strength and inflation-linked flows; Tech's outperformance is more idiosyncratic — AI capex names absorbing the rate shock better than broader growth, but leadership is narrow.
- Healthcare was worst (-4.56%), consistent with rotation out of defensives as yields spiked and likely compounded by ongoing drug pricing and policy overhang. Consumer Discretionary (-3.01%) and Materials (-3.17%) also flagged, pointing to growing concerns about consumer resilience and China demand.
- AI/tech names showed remarkable relative resilience — Tech +0.91% while cyclicals and defensives were routed. The signal: hyperscaler capex and AI infrastructure spend are being treated as secular, non-cyclical earnings streams. Quantum and semis benefited from the "AI as safe haven" trade despite VIX ticking up to 15.84.
- Key risk: CPI print next week against a market that just repriced hawkishly — an upside surprise breaks 10Y through 5.00% and could finally crack Tech's insulation. Opportunity: any in-line print triggers a violent duration rally and broadens the tape beyond mega-cap AI into beaten-down semis, software, and quantum names.

AAPL closed the week at \$332.27, up 1.21% W/W, but the tape masked significant intraweek volatility with shares troughing at \$315.34 on 09/09 before a two-day 5.4% rally on elevated volume (70.0M and 50.7M shares). The recovery aligned with Technology sector leadership (+0.91% 5D) and pushed AAPL to 89% of its 52-week range, within 3.7% of the \$344.57 high.

- Sharp midweek reversal: shares fell from \$328.21 (09/03) to \$315.34 (09/09) — a 3.9% drawdown on rising volume — before rebounding +5.4% into Friday's close of \$332.27.
- Volume surge on 09/09–09/10 (65.6M and 70.0M vs. ~35–40M baseline) signals institutional repositioning, likely tied to product-cycle newsflow typical of Apple's September event window.
- Sector tailwind: Technology led all sectors at +0.91% 5D while defensives (Utilities -1.49%, Real Estate -1.88%) lagged, supporting mega-cap tech rotation.

Multiple filings were flagged this week (09/08, 09/09, 09/11) but form types and contents were not disclosed in the source data; without specifics, we cannot adjust the thesis and flag this as an open item pending review of the EDGAR docket.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$328.31
Week Close	\$332.27
Weekly Chg	+1.21%
52-Wk High	\$344.57
52-Wk Low	\$235.03
52-Wk Pos.	89% of range
Market Cap	\$4.85T
Avg Volume	54,055,456

- Post-event iPhone pre-order and channel-check data expected next week; ASP mix and China demand signals are the key fundamental read-throughs.
- Watch the \$344.57 52-week high as near-term resistance and \$315.34 (09/09 low) as tactical support; a breakout would confirm the reversal pattern.
- Risk: FX and China smartphone competition remain overhangs into the December quarter guide; opportunity lies in Services attach rates and any AI-feature monetization commentary.

Buy | Conviction: 7/10 Constructive reversal off \$315 support on heavy volume, combined with sector leadership and proximity to 52-week highs, favors continued upside into the product cycle, though unverified filings warrant monitoring.

PLTR declined -7.10% for the week, closing at \$167.23 after failing to hold above the \$180 handle following the 09/03 spike to \$182.53. Selling accelerated through five consecutive down sessions on decelerating volume (39.9M → 15.4M shares), suggesting profit-taking and mean reversion off 52-week highs (\$207.52) rather than fundamental repricing, despite modest Tech sector tailwinds (+0.91% 5D).

- Technical exhaustion after the 09/03 reversal candle (\$172.50 open → \$182.53 close); each subsequent session printed lower highs and lower closes, breaching \$170 support on 09/10 at \$165.86 intraday low.
- Valuation-driven de-risking at 60% of the 52-week range, with the stock unable to reclaim the \$180.01 weekly open despite Technology leading sector performance.
- Volume compression into the selloff (final session just 15.4M vs. 39.9M at week open) indicates seller exhaustion rather than institutional distribution.

Multiple filings were flagged this week but content is not disclosed in the provided data; pending review of Form types (likely Form 4 insider activity given cadence), the thesis remains unchanged absent material 8-K disclosure.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$180.01
Week Close	\$167.23
Weekly Chg	-7.10%
52-Wk High	\$207.52
52-Wk Low	\$106.37
52-Wk Pos.	60% of range
Market Cap	\$401.86B
Avg Volume	40,235,169

- Watch \$165.86 (week's low) as immediate support; a break opens downside to the \$160 psychological level, while reclaim of \$172.50 would neutralize the weekly downtrend.
- Monitor commercial AIP customer adds and any DoD/USG contract award announcements — the primary fundamental catalyst absent earnings.
- Risk: continued multiple compression across high-beta AI names if Treasury yields firm; opportunity: any government shutdown-related defense spending clarity could re-rate the government segment.

Neutral | Conviction: 6/10 The -7.10% pullback reflects positioning unwind rather than thesis deterioration, but with no confirmed catalyst and the stock still 60% through its 52-week range, risk/reward is balanced pending a support test near \$165.

AMZN finished the week down 0.88% at \$256.78 after failing to hold above the \$259 resistance level tested on Sept 4, with a mid-week drawdown to \$251.89 (Sept 10) marking the low before a Friday recovery. Price action tracked broader Consumer Discretionary weakness even as Technology (+0.91%) provided a modest tailwind; shares remain at 67% of the 52-week range (\$196.0–\$287.2), suggesting consolidation rather than trend break.

- Rejection at \$259 resistance (Sept 4 open \$259.07) triggered profit-taking, with the Sept 9 gap-down (open \$253.12 vs. prior close \$256.97) on elevated volume of 33.1M shares — the week's highest — signaling institutional distribution.
- Sector rotation was mixed: Tech strength (+0.91%) partially offset weakness in rate-sensitive Real Estate (-1.88%) and Industrials (-1.25%), leaving AMZN caught between AWS-linked Tech tailwinds and retail/logistics-linked cyclical drag.
- Friday recovery to \$256.78 on 26.7M volume reclaimed the \$254 level, suggesting dip-buying interest but insufficient conviction to retest weekly highs.

Six SEC filings were logged this week without disclosed form types or content in the source feed; absent specifics, we treat these as routine (likely Form 4 insider transactions or 8-K administrative filings) and note no thesis-altering disclosure has surfaced. Investors should verify against EDGAR directly before drawing conclusions.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$259.07
Week Close	\$256.78
Weekly Chg	-0.88%
52-Wk High	\$287.20
52-Wk Low	\$196.00
52-Wk Pos.	67% of range
Market Cap	\$2.77T
Avg Volume	47,069,487

- Watch for August retail sales print and any pre-announcement commentary on Prime Big Deal Days (typically early October) — key read on Q3 GMV trajectory.
- Technical: \$251.89 (Sept 10 low) is immediate support; a break opens \$245. Upside pivot remains \$259–\$262; a close above unlocks retest of \$287 52-week high.
- AWS capex and AI monetization commentary from hyperscaler peers (ORCL, MSFT) next week will directly re-rate AMZN's cloud multiple; incremental Anthropic/Bedrock traction is the key catalyst.

Buy | Conviction: 7/10 Modest weekly pullback within an intact uptrend, with AWS/AI optionality and holiday retail setup supporting accumulation into the \$250–\$255 zone.

SPCX advanced +1.76% to close at \$151.21, extending a recovery off the \$140.71 low print on 09/02 with an intraweek high of \$153.47 on 09/08. The move tracked broader risk-on flows into Technology (+0.91% 5D) despite mid-week volatility, with 09/09 volume spiking to 120.6M shares as the ETF failed to hold above \$152 resistance. SPCX now sits at 38% of its 52-week range (\$104.83–\$225.64), reflecting a still-depressed relative positioning versus 2026 highs.

- Sector rotation into Technology (+0.91%) and Energy (+0.80%) supported space-adjacent constituents, offsetting weakness in Industrials (-1.25%) which typically weighs on aerospace/defense-linked holdings.
- Elevated turnover on 09/03 (121.3M shares, +6.4% close) and 09/08 (85.8M, +3.7%) signaled institutional accumulation into the \$147–\$153 zone before profit-taking capped the advance.
- Absence of stock-specific catalysts (no filings, no material news) left SPCX trading as a beta proxy on broader risk sentiment rather than on fundamental space-sector re-rating.

No material SEC filings this week. The thesis is unchanged.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$148.59
Week Close	\$151.21
Weekly Chg	+1.76%
52-Wk High	\$225.64
52-Wk Low	\$104.83
52-Wk Pos.	38% of range
Market Cap	\$1.99T
Avg Volume	102,549,824

- Watch for Q3 launch cadence updates and government space budget commentary from Beltway sources ahead of fiscal year-end (09/30).
- Key technical levels: resistance at \$153.47 (weekly high) and \$158; support at \$147.55/\$145.00 — a break below invalidates the recovery structure.
- Risk: continued Industrials sector drag (-1.25% 5D) could pressure launch-service and satellite-manufacturing constituents; opportunity lies in any renewed DoD contract flow to space primes.

Neutral | Conviction: 6/10 Constructive weekly price action and volume signature are offset by lack of idiosyncratic catalysts and SPCX's position at only 38% of its 52-week range, warranting patience for a confirmed breakout above \$153.

HOOD retraced -6.56% to \$112.57 after failing to hold the \$125 handle intraweek (Sep 8 high open of \$125.07), giving back the bulk of the prior week's breakout gains despite the print sitting at 54% of the 52-week range (\$63.52–\$153.86). The pullback occurred against a mixed tape where Technology led at +0.91% but risk-off sectors (Real Estate -1.88%, Utilities -1.49%) signaled defensive rotation, pressuring high-beta retail brokerage names.

- Profit-taking following the Sep 3 surge (close \$124.72 on 51.6M volume, ~2–3x average) as momentum faded, with four consecutive lower closes from \$122.11 → \$112.57.
- Distribution signature: Sep 8 reversal from \$125.07 open to \$117.34 close on 26M volume marked the week's key rejection candle at prior resistance.
- Sector crosscurrents — modest Tech tailwind (+0.91%) was insufficient to offset broader risk-off tone and stock-specific supply after the parabolic move.

Six SEC filings were logged (Sep 8–11) but content metadata was not provided; absent specifics on form type (likely a mix of Form 4 insider activity and/or 8-K disclosures given the cluster), we flag these for follow-up but treat the thesis as unchanged pending review.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$120.47
Week Close	\$112.57
Weekly Chg	-6.56%
52-Wk High	\$153.86
52-Wk Low	\$63.52
52-Wk Pos.	54% of range
Market Cap	\$101.21B
Avg Volume	23,647,969

- August monthly operating metrics (DARTs, MAUs, crypto notional volumes, net deposits) typically released mid-month — key read on retail engagement post-summer.
- Watch the \$110 support zone (prior breakout base); a break exposes \$103–\$106 gap fill from Sep 2, while reclaim of \$120 reopens the \$125 resistance test.
- Crypto volume sensitivity remains the swing factor — BTC/ETH tape action and any SEC/CFTC regulatory headlines directly impact HOOD's highest-margin revenue line.

Neutral | Conviction: 6/10 Post-breakout digestion is healthy but unresolved; we want confirmation of \$110 support holding and clarity on this week's filings cluster before adding conviction either direction.

META advanced +5.83% to close at \$648.03, decisively breaking above the \$620 resistance zone on Tuesday 09/09 with a gap-up open at \$648.64 and elevated volume of 35.9M shares (roughly 2x the week's average). The move outpaced the Communication Services sector (-0.69% 5D), suggesting stock-specific catalysts rather than sector rotation drove performance, with shares now sitting at 47% of the 52-week range (\$520.26–\$790.80).

- Tuesday's 5.9% single-day gap-up from \$616.21 to \$653.69 on 35.9M shares was the week's defining move, indicating a discrete institutional catalyst — likely tied to one of the six SEC filings clustered on 09/08–09/09.
- Relative strength versus Comm. Svcs (-0.69%) and modest Tech tailwind (+0.91%) confirm idiosyncratic buying rather than beta-driven flows.
- Follow-through was constructive: despite intraday profit-taking on 09/10 (close \$644.38), buyers defended the \$644 level and shares reclaimed \$648 into Friday's close.

Six SEC filings clustered around 09/08–09/09 coincide precisely with the week's breakout, but filing types/contents are not disclosed in the provided data — investors should review the EDGAR docket directly, as the volume signature (35.9M on 09/09) is consistent with a materially market-moving disclosure. Absent specifics, we flag this as an elevated-attention item for thesis refresh.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$612.35
Week Close	\$648.03
Weekly Chg	+5.83%
52-Wk High	\$790.80
52-Wk Low	\$520.26
52-Wk Pos.	47% of range
Market Cap	\$1.65T
Avg Volume	18,264,382

- Watch for follow-through above the \$653.71 intraweek high (09/10 open); a sustained close above would open a path toward the mid-range \$655–\$680 zone.
- Key support sits at \$644 (09/10 low reclaim) and then the breakout retest at \$616–\$620; failure below \$616 would negate this week's setup.
- Monitor ad-spend commentary from peers and any Reality Labs / AI capex updates ahead of Q3 print — margin trajectory and AI infrastructure spend remain the swing factors on the multiple.

Buy | Conviction: 7/10 Decisive breakout on 2x volume with relative strength against a weak Comm. Svcs sector supports a constructive stance, though conviction is capped pending clarity on the six clustered filings.

MU consolidated at elevated levels, closing the week at \$975.26 (+0.40%) after an intraweek surge to \$1,036.40 on 09/08 that faded into distribution the back half of the week. Price action reflects digestion of the prior week's breakout above \$1,000, supported by a modest Technology sector tailwind (+0.91% 5D) as HBM/DRAM pricing enthusiasm remains the dominant narrative into the fiscal Q4 print.

- Mid-week melt-up: shares gapped from \$971.34 open (09/04) to a \$1,016.59 close on 35.2M shares (highest weekly volume), extending HBM/AI memory momentum before profit-taking capped upside near \$1,036.
- Back-half distribution: three consecutive lower closes (09/09 \$1,027.77 → 09/11 \$975.26) on steady 21–26M volume signaled institutional trimming ahead of the FQ4 catalyst.
- Sector support was constructive but not decisive — Technology led at +0.91% 5D, insufficient to offset stock-specific profit-taking at 75% of the 52-wk range (\$154.65–\$1,255).

Six SEC filings hit the tape between 09/08–09/11 but content was not disclosed in the feed; given proximity to fiscal year-end, these are likely a mix of Form 4 insider transactions and routine 8-K/prospectus items — we flag for review but assume no thesis-altering disclosure absent confirmation.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$971.34
Week Close	\$975.26
Weekly Chg	+0.40%
52-Wk High	\$1255.00
52-Wk Low	\$154.65
52-Wk Pos.	75% of range
Market Cap	\$1.10T
Avg Volume	40,929,053

- FQ4'26 earnings print is the near-term binary catalyst — consensus focus on HBM3E/HBM4 revenue ramp, DRAM ASP trajectory, and FY27 capex guide.
- Technical: \$970 (prior breakout retest) is key support; loss opens \$930 gap-fill. Reclaim of \$1,020 required to resume uptrend toward the \$1,255 52-wk high.
- Risk/opportunity: HBM allocation commentary from hyperscaler capex updates and any Samsung HBM4 qualification news at NVDA could swing sentiment materially in either direction.

Buy | Conviction: 7/10 Structural HBM demand and DRAM cycle tailwinds remain intact, but at 75% of 52-wk range with distribution emerging into earnings, we prefer sizing discipline over aggressive adds at these levels.

TSLA closed the week at \$365.44 (+0.93% W/W), consolidating within a volatile \$354.08–\$376.37 intraweek range on elevated turnover (peak volume of 65M on 9/04). Price action tracked broader Technology sector strength (+0.91% 5D) but underperformed on a beta-adjusted basis, with shares stuck at just 34% of the 52-week range (\$297.38–\$498.83), reflecting persistent skepticism on near-term delivery cadence.

- Sharp mid-week reversal: shares surged to \$376.37 on 9/03 (63.6M volume) before reversing -5.9% intraday on 9/04 to \$354.08, suggesting profit-taking into strength rather than a fundamental catalyst.
- Recovery rally on 9/08 (+3.1% to \$368.16) aligned with Technology sector leadership (+0.91% 5D) and Energy strength (+0.80%), both relevant to TSLA's dual auto/energy exposure.
- Volume decay through week-end (30M on 9/11 vs. 65M on 9/04) indicates fading conviction on both sides, consistent with range-bound consolidation near the \$365 pivot.

Multiple SEC filings were flagged this week (six filings between 9/08–9/11), but form types and contents were not disclosed in the source data; investors should review the EDGAR docket directly, as clustered filings of this frequency often correlate with Section 16 insider activity or 8-K disclosures material to the thesis.

[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$362.07
Week Close	\$365.44
Weekly Chg	+0.93%
52-Wk High	\$498.83
52-Wk Low	\$297.38
52-Wk Pos.	34% of range
Market Cap	\$1.44T
Avg Volume	40,482,440

- Monitor September monthly China insurance registration data (Xiaomi/BYD competitive read-through) and any pre-announcement on Q3 delivery figures due early October.
- Key technical levels: support at \$354 (9/04 low) and \$348; resistance at \$376 (9/03 high), with a break above unlocking a move toward the \$400 psychological level.
- Robotaxi/FSD unsupervised commercialization updates and Optimus production milestones remain the primary asymmetric catalysts; downside risk centers on Q3 auto gross margin compression if incentive activity persisted through September.

Neutral | Conviction: 6/10 Range-bound price action at 34% of 52-week range with fading volume argues for patience ahead of Q3 delivery data; risk/reward is balanced pending clarity on filings and autonomy milestones.

NVDA declined 5.43% on the week, closing at \$218.29 after failing to hold the \$230.83 intraweek high set on Sept 4. The reversal came despite Technology leading sector performance (+0.91% 5D), suggesting stock-specific profit-taking near the upper end of the 52-week range (shares finished at 75% of range), with heavy volume on the Sept 8 gap-down (232.85 open → 225.48 close, 123M shares) marking the pivot.

- Distribution pattern from overbought levels: three consecutive down days (Sept 8–11) erased the prior week's rally, with each session opening near the prior close and selling off, indicative of institutional trimming near \$230+ resistance.
- Elevated volume on the reversal day (Sept 8: 123M shares vs. subsequent 83–106M) confirms the top was actively sold rather than drifted lower on light participation.
- Sector rotation was not the driver — Tech led the tape (+0.91%), so NVDA's -5.43% represents relative underperformance and single-name de-risking, likely tied to positioning ahead of upcoming catalysts.

Multiple SEC filings were submitted between Sept 8–11 but form types and content are not specified in the provided data; absent detail, we treat these as administrative pending review. Thesis is unchanged pending confirmation of filing types (likely Form 4 insider activity given the cluster and timing).

52-Wk Low	\$164.27
52-Wk Pos.	75% of range
Market Cap	\$5.27T
Avg Volume	132,087,064

- Watch for follow-through on the Sept 11 close of \$218.29; a break below \$218 opens a retest of the \$210 area, while reclaiming \$225 would negate the weekly reversal.
- Monitor hyperscaler capex commentary and any GTC/product cadence updates — Blackwell shipment linearity and Rubin roadmap disclosures remain the primary fundamental drivers into year-end.
- Key risk: China export policy headlines and any incremental H20/downstream SKU restrictions; key opportunity: sovereign AI deal announcements that could re-rate FY27 data center estimates.

Buy | Conviction: 7/10 The weekly pullback is technical positioning near range highs rather than a fundamental thesis break; secular AI infrastructure demand and Blackwell ramp support accumulation on weakness toward \$210–215.

GOOGL closed the week at \$338.50, down 1.16% from \$342.47, underperforming the broader Technology sector (+0.91% 5D) as Communication Services lagged (-0.69% 5D). The stock retested support near \$330.65 on 09-09 with elevated volume of 33.1M shares (~45% above weekly average), before recovering roughly 2.4% off the intraweek low to reclaim the \$338 handle by Friday.

- Sector rotation weighed on shares: Comm. Svcs (-0.69%) lagged Tech (+0.91%), pressuring GOOGL despite its AI/cloud exposure typically tracking Tech beta.
- Mid-week capitulation on 09-09 (33.15M volume, close \$330.65) marked the weekly low, suggesting institutional repositioning ahead of upcoming catalysts.
- Recovery into Friday's \$338.50 close on steady volume (24.7M) indicates dip-buying interest, keeping the stock at 59% of its 52-week range (\$235.84–\$408.61).

Multiple SEC filings were logged this week without disclosed content in the feed; absent specifics, we treat these as routine administrative filings and leave the thesis unchanged pending review of the actual documents.

1-month price performance vs SPY (shaded = current week)

Week Open	\$342.47
Week Close	\$338.50
Weekly Chg	-1.16%
52-Wk High	\$408.61
52-Wk Low	\$235.84
52-Wk Pos.	59% of range
Market Cap	\$4.14T
Avg Volume	29,850,733

- Monitor DOJ remedies proceedings and any ad-tech antitrust developments, which remain the largest overhang on the multiple.
- Technical watch: \$330 as near-term support (tested 09-09) and \$342.47 weekly high as resistance; a break above opens path toward \$360.
- Q3 print approaches — watch Search query volume trends amid AI Overviews rollout and Google Cloud operating margin trajectory as key thesis inputs.

Buy | Conviction: 7/10 Modest weekly weakness within a constructive longer-term setup; sub-\$340 entry remains attractive given cloud/AI monetization runway, though regulatory tail risk caps conviction.

MRVL rallied +11.55% to \$236.10, decisively breaking out from the \$205–\$210 base on the 9/4 gap-up (open \$211.66, close \$223.55, volume 21.2M — the week's high print). Follow-through on 9/9 to \$235.01 and a fresh weekly high of \$236.10 on 9/11 pushed the name to 64% of its 52-week range, materially outperforming the Technology sector's modest +0.91% 5D gain and pointing to a stock-specific AI/custom silicon catalyst rather than beta.

- Breakout session on 9/4: shares gapped from a \$206.48 close to a \$211.66 open and finished +7.0% at \$223.55 on the week's peak volume (21.2M), consistent with an institutional re-rating tied to AI/custom ASIC datapoint(s).
- Follow-through momentum: 9/9 close of \$235.01 (+4.3%) and 9/11 close at the weekly high of \$236.10 confirmed accumulation, with only a shallow 9/10 pullback to \$226.96 (held above the \$223 breakout pivot).
- Sector tailwind was marginal (Tech +0.91% 5D), so MRVL's ~+11.6% move reflects idiosyncratic strength rather than broad semi rotation.

Six SEC filings were logged this week (9/8, 9/9, 9/11) but form types and content were not disclosed in the feed; absent specifics, we flag the elevated filing cadence as a monitoring item but make no thesis change pending review of the underlying documents.

Week Open	\$211.66
Week Close	\$236.10
Weekly Chg	+11.55%
52-Wk High	\$329.88
52-Wk Low	\$66.33
52-Wk Pos.	64% of range
Market Cap	\$212.18B
Avg Volume	31,245,996

- Watch for follow-on commentary at investor conferences and any custom-silicon program updates (hyperscaler ASIC ramp cadence) that could sustain the re-rating.
- Technical: \$223 (prior breakout pivot / 9/4 close) is first support; a sustained hold above \$236 opens a measured move toward the \$250s, while a loss of \$223 would suggest breakout failure.
- Risk/opportunity: concentration in a small set of hyperscale AI customers cuts both ways — incremental order confirmation is the upside catalyst; any capex digestion signal from hyperscalers is the primary downside risk.

Buy | Conviction: 7/10 Decisive breakout on expanding volume with idiosyncratic outperformance vs. sector supports a constructive stance, tempered by an extended weekly move and unresolved filing detail.
