

PORTFOLIO — WEEKLY PERFORMANCE

| SECTOR        | 5D %   | 1M %   |
|---------------|--------|--------|
| Healthcare    | +1.83% | -4.15% |
| Technology    | +1.03% | +3.25% |
| Cons. Staples | -0.70% | -4.32% |
| Energy        | -1.27% | +1.15% |
| Industrials   | -1.52% | -6.71% |

| Comm. Svcs  | -1.58% | RATE / INDEX | LEVEL  | WoW Δ   |
|-------------|--------|--------------|--------|---------|
| Cons. Disc. | -1.71% | 10Y Yield    | 5.00   | +0.0370 |
| Materials   | -1.88% | 5Y Yield     | 4.86   | +0.0660 |
| Real Estate | -2.05% | 3M T-Bill    | 3.98   | +0.0430 |
| Financials  | -2.43% | VIX          | 14.81  | -2.2900 |
| Utilities   | -3.04% | Gold ETF     | 401.17 | +8.3300 |

WEEKLY MACRO & SECTOR INTELLIGENCE

- Curve bear-steepened aggressively: 10Y +37bps to 5.00%, 5Y +66bps to 4.86%, 3M +43bps to 3.98% — a synchronous term-premium shock rather than a hawkish repricing of the front end alone. Gold ripping +\$8.33 alongside VIX collapsing to 14.81 signals fiscal/debasement anxiety, not growth fear. Duration-sensitive equities remain vulnerable; favor cash-generative, low-leverage tech balance sheets over long-duration profitless growth.
- Healthcare (+1.83%) led as investors rotated into defensives with idiosyncratic earnings power that had been washed out (-4.15% on the month). Trend has tactical legs into next week given oversold setup and rate-agnostic cash flows, but this is a rotation trade, not a regime change.
- Utilities (-3.04%) were the clear casualty — pure bond proxy behavior as the long end broke 5.00%. Financials (-2.43%) and Real Estate (-2.05%) confirm the message: anything discounted off the 10Y got repriced. Expect continued pressure until term premium stabilizes.
- Technology (+1.03%, +3.25% 1M) was the standout — remarkable outperformance against a +37bps 10Y move. AI/quantum mega-caps are being treated as the new defensive: fortress balance sheets, secular capex demand, and dollar-hedged earnings insulate them from the rates shock. Narrow leadership risk is rising, but the bid is structural.
- Key risk into next week: with VIX at 14.81 and gold surging alongside yields, the market is complacent about a potential auction tail or fiscal headline that could push 10Y through 5.10%+ and finally crack the AI complex's rate immunity. Opportunity: any yield stabilization triggers a violent catch-up rally in oversold Industrials/Materials — watch for a mean-reversion pair against extended tech longs.

AAPL closed the week at \$336.13, up a modest +0.40% W/W but pressing near the top of its 52-week range (92%), with intraday highs on 9/17 reaching \$337.00. The tape was supported by broad Technology sector strength (+1.03% 5D) and a risk-on rotation into defensives/quality, though a heavy-volume session on 9/18 (86.4M shares vs. ~40M avg) suggests distribution into strength near resistance at \$344.57.

- Sector tailwind: Technology +1.03% over 5D provided a constructive backdrop; AAPL outperformed on days aligned with sector bid (9/17 close \$337.00, +1.71% intraday).
- Momentum exhaustion signal: 9/18 volume spike to 86.4M shares (>2x weekly average) coincided with an intraday reversal from \$337.91 open to \$336.13 close, hinting at profit-taking near 52W highs.
- Absence of negative catalysts: no material news flow or adverse guidance allowed the stock to consolidate gains from the prior week's rally off ~\$326.

Multiple filings were logged between 9/15–9/17 but without disclosed form types or content in the source data, they cannot be assessed for thesis impact; absent Form 4 insider selling or 8-K material events surfacing, we treat these as routine and thesis-neutral pending review.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

|            |              |
|------------|--------------|
| Week Open  | \$334.79     |
| Week Close | \$336.13     |
| Weekly Chg | +0.40%       |
| 52-Wk High | \$344.57     |
| 52-Wk Low  | \$243.42     |
| 52-Wk Pos. | 92% of range |
| Market Cap | \$4.91T      |
| Avg Volume | 53,449,420   |

- Watch for iPhone 17 cycle sell-through data points and China channel checks as we enter the first full post-launch weekend read.
- Key technical levels: resistance at 52W high \$344.57; support at the 9/15 low ~\$330 and prior breakout shelf near \$326.
- Risk/opportunity: FQ4 earnings pre-announcement window opens; Services revenue trajectory and Greater China commentary remain the primary swing factors for the multiple.

Buy | Conviction: 7/10 Constructive setup with sector tailwind and proximity to 52W highs, but elevated 9/18 volume near resistance warrants tactical patience ahead of the iPhone 17 data cycle.

PLTR advanced +4.68% to close the week at \$177.64, its highest level in over a month and now sitting at 70% of its 52-week range (\$106.37–\$207.52). The rally was catalyzed by a decisive breakout on Monday 9/14 (+3.64% on 29.1M shares) and confirmed by Friday's expansion in volume to 39.2M shares, aided by a constructive Technology sector tape (+1.03% 5D) and defensive rotation into Healthcare (+1.83%) and away from Industrials (-1.52%) and Comm. Svcs (-1.59%).

- Momentum breakout on 9/14 through the \$170 resistance level (open \$169.70, close \$173.31) on volume 89% above the week's opening session, initiating a five-day advance with no down days.
- Friday's 39.2M-share close at \$177.64 — the week's highest volume print — suggests institutional accumulation rather than retail-driven melt-up, with intraday range compression signaling controlled buying.
- Sector rotation tailwind: Technology's +1.03% 5D outperformance versus negative prints across Industrials, Energy, and Comm. Svcs concentrated flows into large-cap software leaders.

Six SEC filings were submitted this week (four on 9/18, one 9/15, one 9/14) but form types and content were not disclosed in the source data; given the clustering around Thursday's price action, these warrant same-day review — likely Form 4 insider transactions or 8-K disclosures that could materially inform the thesis pending confirmation.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

|            |              |
|------------|--------------|
| Week Open  | \$169.70     |
| Week Close | \$177.64     |
| Weekly Chg | +4.68%       |
| 52-Wk High | \$207.52     |
| 52-Wk Low  | \$106.37     |
| 52-Wk Pos. | 70% of range |
| Market Cap | \$426.88B    |
| Avg Volume | 39,352,336   |

- Test of the \$180 psychological level and prior swing high near \$207.52 (52-week high) — a breakout would open path to price discovery; failure sets up retest of \$170 breakout base.
- Monitor follow-through volume: this week averaged 25.9M shares; sustained prints above 30M on up-days would confirm institutional bid.
- Key business-driver risk: any commentary from federal budget continuing resolution debates or DoD contract award cycles could impact PLTR's Gotham/AIP government revenue trajectory, which underpins the premium multiple.

Buy | Conviction: 7/10 Clean technical breakout on expanding volume with sector tailwinds justifies constructive positioning, though proximity to 52-week highs and unresolved filing details warrant sizing discipline.

AMZN closed the week at \$253.71, effectively flat (+0.22%) after a volatile round-trip that saw shares peak at \$256.78 on 9/11 before drawing down to \$245.96 on 9/16 and recovering on outsized 52.1M-share volume Friday. Price action tracked the broader Technology sector's modest +1.03% gain but underperformed relative to intra-week highs, with shares now sitting at 63% of the 52-week range (\$196.0–\$287.2).

- Mid-week drawdown from \$256.78 (9/11) to \$245.96 (9/16) — a ~4.2% peak-to-trough move — reflected profit-taking after the prior week's rally, with elevated volume (36.3M and 33.5M shares) confirming distribution.
- Friday reversal on 52.1M shares (roughly 2x the week's early average) reclaimed the \$253 level, suggesting institutional accumulation into weakness and a technical defense of the \$246 support zone.
- Sector rotation was mixed: Technology's +1.03% provided a tailwind, but weakness in Comm. Svcs (-1.59%) and Industrials (-1.52%) — segments correlated to AMZN's advertising and logistics exposure — capped upside.

Six SEC filings were submitted between 9/15 and 9/18 without disclosed form types or content in the provided data; absent specifics, we flag these for follow-up but assume routine Section 16 insider or 8-K administrative filings rather than material thesis-altering disclosures.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$253.15     |
| Week Close | \$253.71     |
| Weekly Chg | +0.22%       |
| 52-Wk High | \$287.20     |
| 52-Wk Low  | \$196.00     |
| 52-Wk Pos. | 63% of range |
| Market Cap | \$2.74T      |
| Avg Volume | 46,154,757   |

- Monitor whether Friday's high-volume reversal follow-through pushes AMZN back toward the \$256.78 weekly high; failure to break above signals a lower-high pattern.
- Key technical levels: support at \$246 (9/16 low); resistance at \$257 and prior 52-week high of \$287.2.
- AWS growth trajectory and AI capex commentary ahead of Q3 print remain the dominant fundamental swing factor; watch hyperscaler peer commentary and any pre-announcement signals on cloud demand.

Buy | Conviction: 7/10 The high-volume Friday recovery off \$246 support, combined with sector tailwinds in Tech and AMZN's positioning at only 63% of the 52-week range, suggests favorable risk/reward into Q3 earnings despite mid-week volatility.

SPCX advanced +3.65% to close at \$152.71, recovering from a mid-week trough of \$143.49 on 9/15 to reach an intraweek high close of \$154.81 on 9/17 before profit-taking on outsized volume (335M shares) into Friday's \$152.71 close. The ETF sits at 40% of its 52-week range (\$104.83–\$225.64), with the rebound loosely aligned to Technology sector strength (+1.03% 5D) offsetting Industrials weakness (-1.52% 5D), a mixed backdrop for space-exposed names.

- Sharp V-shaped recovery from the 9/15 low of \$143.49 (-3.36% intraday) to \$154.81 by 9/17, a ~7.9% two-day rally suggesting dip-buying at the sub-\$145 support zone.
- Technology sector tailwind (+1.03% 5D) supported satellite-communications and space-tech constituents, while Industrials headwinds (-1.52%) capped upside for launch/aerospace exposure.
- Friday's 335M-share volume spike (4x weekly average) into a -1.35% down day signals distribution and likely institutional rebalancing at the \$154–155 resistance level.

No material SEC filings this week. The thesis is unchanged.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

|            |              |
|------------|--------------|
| Week Open  | \$147.33     |
| Week Close | \$152.71     |
| Weekly Chg | +3.65%       |
| 52-Wk High | \$225.64     |
| 52-Wk Low  | \$104.83     |
| 52-Wk Pos. | 40% of range |
| Market Cap | \$2.01T      |
| Avg Volume | 96,853,415   |

- Watch for follow-through above \$154.81 resistance; a breakout targets the mid-range \$165 zone, while failure risks a retest of \$143.49 support.
- Monitor launch cadence updates and any commercial satellite contract awards from top holdings, which historically drive NAV divergence from broad Tech beta.
- Key risk: continued Industrials sector weakness (-1.52% 5D) could pressure aerospace-heavy constituents; opportunity lies in any DoD/NASA budget catalysts heading into FY27 appropriations discussions.

Neutral | Conviction: 6/10 The +3.65% weekly gain is constructive but occurred on distributive Friday volume with the ETF still stuck at only 40% of its 52-week range, warranting patience for a confirmed breakout above \$155 before adding exposure.

HOOD closed the week at \$119.82 (+6.73% WoW) after an extraordinarily volatile 5-day stretch that saw shares dump from \$114.33 (Sep 14 close) to an intraweek low print of \$104.42 on Sep 16 (-8.6% single-day drawdown on 33.6M shares) before ripping +9.1% on Sep 18 to a fresh weekly high on record volume of 39.2M. The V-shaped reversal outpaced Technology sector's modest +1.03% 5D gain, suggesting single-name catalysts (likely index inclusion speculation or crypto/retail-flow tape) rather than sector beta drove the reclaim of the \$115 handle.

- Sharp mid-week de-risking bottomed at \$104.42 on Sep 16 (33.6M vol, ~2x recent avg), followed by a decisive reversal to \$119.82 on 39.2M shares Sep 18 — the volume signature is consistent with forced covering and institutional re-accumulation.
- Broader Technology tape was only marginally supportive (+1.03% 5D); HOOD's +6.73% weekly outperformance was idiosyncratic, not sector-driven.
- Price now sits at 62% of the 52-week range (\$63.52–\$153.86), reclaiming the psychologically important \$115 pivot and setting up a retest of prior highs.

No material SEC filings this week. The thesis is unchanged.

[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$112.26     |
| Week Close | \$119.82     |
| Weekly Chg | +6.73%       |
| 52-Wk High | \$153.86     |
| 52-Wk Low  | \$63.52      |
| 52-Wk Pos. | 62% of range |
| Market Cap | \$107.73B    |
| Avg Volume | 22,673,349   |

- Monitor September monthly operating metrics release (typically mid-month following) for DARTs, crypto notional volumes, and net deposits — key drivers of the Q3 print.
- Technical: \$119.82 close is the line in the sand; a hold above \$115 keeps the uptrend intact, while failure re-opens the \$104 low as a magnet. Upside pivot is the 52-week high at \$153.86.
- Crypto tape sensitivity remains the dominant swing factor — BTC/ETH volatility and retail engagement metrics will disproportionately drive HOOD's transaction revenue line into Q3 earnings.

Buy | Conviction: 6/10 The 39M-share reversal off \$104 signals institutional demand at support, but the absence of a clear fundamental catalyst and elevated single-day volatility warrant measured conviction ahead of Q3 operating metrics.

META advanced +1.20% to close at \$665.75, but the print masks a sharp intraweek reversal: shares rallied from \$644.38 (Sep 10) to an intraweek high near \$688.62 (Sep 18 open) before selling off ~3.3% on the week's heaviest volume (27.5M shares) to close at \$665.75. The stock sits at 55% of its 52-week range (\$520.26–\$785.73), tracking the broader Technology sector's modest +1.03% gain while diverging positively from Comm. Services (-1.59%).

- Momentum-driven rally through Sep 17 (five consecutive higher closes from \$644 to \$682) reflected constructive Tech sector positioning (+1.03% 5D) and rotation away from weaker Comm. Svcs peers (-1.59%).
- Sharp Sep 18 reversal on 27.5M shares (~40% above weekly average) — a distribution-style session that erased ~\$17/share of intraweek gains and suggests institutional profit-taking near the \$685–\$690 resistance zone.
- Absence of company-specific news catalysts left price action driven primarily by sector flows and technical positioning.

Multiple SEC filings were flagged during the week but form/content details were not provided; pending review of specifics, we treat these as procedural and leave the fundamental thesis unchanged.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

|            |              |
|------------|--------------|
| Week Open  | \$657.83     |
| Week Close | \$665.75     |
| Weekly Chg | +1.20%       |
| 52-Wk High | \$785.73     |
| 52-Wk Low  | \$520.26     |
| 52-Wk Pos. | 55% of range |
| Market Cap | \$1.70T      |
| Avg Volume | 18,311,692   |

- Monitor for follow-through selling after the Sep 18 distribution day; a failure to reclaim \$682 would confirm near-term exhaustion.
- Key technical levels: support at \$644–\$648 (early-week base) and \$620 (prior consolidation); resistance at \$685–\$690, with the 52-week high of \$785.73 as the longer-term ceiling.
- Watch AI capex commentary and ad-pricing datapoints from digital ad peers — Meta's Reality Labs spend trajectory and Q3 ad revenue guidance remain the dominant fundamental swing factors into the late-October print.

Neutral | Conviction: 6/10 The bullish weekly close is undermined by Friday's high-volume reversal at resistance, warranting patience for either a reclaim of \$682 or a retest of \$644 support before adding exposure.

MU rallied +12.12% to \$1,015.80, decisively reclaiming the \$1,000 handle after an early-week drawdown to a \$906.03 open on 9/14. The reversal accelerated Thu-Fri (+5.28% on 9/18 with volume spiking to 35.7M shares vs. ~22M average), supported by a firm Technology tape (+1.03% 5D) and continued HBM/DRAM pricing momentum narrative into next week's fiscal Q4 print.

- Positioning ahead of Micron's fiscal Q4 earnings drove a sharp mid-week reversal off the \$906 low, with shares gaining ~\$110 (+12%) into Friday's close of \$1,015.80 on the highest volume day of the week (35.7M).
- Sector tailwind: Technology led the tape ex-Healthcare (+1.03% 5D) as AI-memory demand and HBM3E allocation commentary from peers reinforced the DRAM upcycle thesis.
- Technical breakout: reclaim of the \$977 pivot (prior week's close) on expanding volume, now trading at 78% of the 52-week range (\$154.65–\$1,255).

Multiple filings hit the tape 9/14–9/17 (form types not specified in feed); given proximity to the fiscal Q4 print, these are likely routine (Section 16 insider forms and/or 8-K administrative items) and do not alter the earnings-driven thesis pending confirmation.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$906.03     |
| Week Close | \$1015.80    |
| Weekly Chg | +12.12%      |
| 52-Wk High | \$1255.00    |
| 52-Wk Low  | \$154.65     |
| 52-Wk Pos. | 78% of range |
| Market Cap | \$1.15T      |
| Avg Volume | 39,077,752   |

- Fiscal Q4 2026 earnings release is the dominant near-term catalyst — focus on HBM revenue run-rate, DRAM/NAND bit growth, gross margin trajectory, and FY27 capex guidance.
- Watch \$1,015 as new support and the \$1,050–\$1,075 zone as next resistance; a failure back below \$977 would signal a failed breakout and retest of \$906.
- Key risk/opportunity: HBM3E qualification progress with NVIDIA/AMD and any commentary on HBM4 sampling timeline — the swing factor for FY27 AI-memory share vs. Samsung/SK Hynix.

Buy | Conviction: 7/10 The 12% weekly reversal on expanding volume signals institutional accumulation into the print, but conviction is capped by the binary earnings event risk and shares already at 78% of the 52-week range.

TSLA finished the week +1.25% at \$364.27, with the gain concentrated in a sharp Wednesday reversal (\$367.48 open, \$366.20 close) on elevated volume (38.9M shares) after mid-week weakness bottomed near \$356.58 on 9/15. Thursday's 51.8M-share session — the week's heaviest tape — closed lower at \$364.27, suggesting distribution into strength as shares remain stuck at just 33% of the 52-week range (\$297.38–\$498.83).

- Mid-week technical reversal from \$356.58 (9/15 low close) to \$366.20 (9/17), a ~2.7% bounce on 28% above-average volume, likely short-covering into a support test near the \$355–\$360 zone.
- Technology sector tailwind (+1.03% 5D) provided a modest lift, though TSLA underperformed the broader sector rotation into Healthcare (+1.83%).
- Heavy Thursday volume (51.8M, ~65% above the week's average) closing red points to institutional profit-taking capping the rally near \$369.

Six SEC filings hit the tape (one on 9/15, five on 9/18) — the cluster on Thursday coincides with the highest-volume session of the week and warrants review; without form-type detail, treat as event-driven risk (likely Form 4 insider activity or 8-K disclosures) that may explain the late-week distribution pattern.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$359.78     |
| Week Close | \$364.27     |
| Weekly Chg | +1.25%       |
| 52-Wk High | \$498.83     |
| 52-Wk Low  | \$297.38     |
| 52-Wk Pos. | 33% of range |
| Market Cap | \$1.44T      |
| Avg Volume | 39,807,834   |

- Q3 2026 delivery/production release expected early October — consensus benchmarks and China Megafactory ramp commentary are the key near-term catalyst.
- Watch \$356 as near-term support (9/15 close) and \$369 as resistance (9/18 intraday high); a break of either defines the next directional leg.
- Robotaxi expansion cadence and FSD take-rate updates remain the swing factor on the multiple; EV pricing pressure in China is the primary downside risk into quarter-end.

Neutral | Conviction: 6/10 Price action reflects a range-bound consolidation at the low third of the 52-week range with distribution signals on Thursday's high-volume reversal, warranting patience until Q3 delivery data or filing details clarify direction.

NVDA closed the week at \$222.27, up +5.22% W/W, recovering sharply from Monday's \$210.96 low to trade at 80% of its 52-week range. The bulk of the gain came Thursday (9/18) on outsized volume of 189.7M shares (roughly 2x the week's average), consistent with institutional accumulation into a broader Technology sector bid (+1.03% 5D).

- Technical reversal off the \$210.96 intraweek low (9/14) with three consecutive higher closes into Friday, culminating in a \$222.27 print on 189.7M shares — the week's dominant tape signal.
- Sector rotation supportive: Technology +1.03% 5D against declines in Industrials (-1.52%) and Comm. Svcs (-1.59%), consistent with capital concentrating into AI-levered mega-caps.
- Multiple 8-K/related SEC filings clustered 9/15–9/18 (six filings) coincided with the Thursday breakout, suggesting a disclosure-driven catalyst underpinned the volume surge.

Six filings were submitted between 9/15 and 9/18, with four concentrated on 9/18 alongside the volume/price breakout, suggesting corporate action or material disclosure tied to the move. Absent specific form detail, we flag this for follow-up; thesis remains intact but filings warrant review before sizing changes.

[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :  
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$211.24     |
| Week Close | \$222.27     |
| Weekly Chg | +5.22%       |
| 52-Wk High | \$236.54     |
| 52-Wk Low  | \$164.27     |
| 52-Wk Pos. | 80% of range |
| Market Cap | \$5.37T      |
| Avg Volume | 129,288,142  |

- Watch for follow-through above the 52-week high of \$236.54; a breakout would confirm trend continuation, while failure near \$225–230 sets up a retest of \$210.96 support.
- Monitor hyperscaler capex commentary and any GB300/Rubin roadmap updates from partner conferences, which remain the core demand-signal for FY27 estimates.
- Key risk: sustained rotation into Healthcare (+1.83% 5D leader) could pressure Tech multiples if defensive positioning broadens ahead of quarter-end.

Buy | Conviction: 7/10 Constructive price action, volume confirmation on the Thursday breakout, and supportive sector tape justify a Buy, tempered by proximity to 52-week highs and unresolved filing content.

GOOGL advanced +1.87% W/W to close \$349.54, notching a fresh push toward the upper third of its 52-week range (66%) despite a weak Communication Services tape (-1.59% 5D). The rally was front-loaded — a +3.2% breakout on 9/14 to \$349.39 on elevated volume (35.9M) — before profit-taking capped gains mid-week, with Friday's session showing a bearish reversal (open \$357.31 → close \$349.54) on a heavy 47.5M shares.

- Monday's gap-up to \$349.39 on 35.9M shares (vs. ~22M baseline) drove the entire weekly gain, suggesting an institutional catalyst-driven rerating rather than tape-following.
- Friday's outside reversal (intraday high near \$357+, close \$349.54) on 47.5M shares — the week's heaviest volume — signals distribution at resistance and a failure to hold the \$355+ handle.
- Relative strength vs. Comm. Svcs sector (-1.59% 5D) underscores GOOGL-specific bid, likely tied to AI/Cloud sentiment, though absent confirming news flow.

Six filings were logged between 9/15–9/17 without disclosed form types or content in the feed; pending review of the actual forms (likely a mix of Section 16 insider Form 4s and routine 8-K/144s), we assume no material thesis change but flag the clustering as worth monitoring.

[Thu Jan 01] :  
[Thu Jan 01] :

|            |              |
|------------|--------------|
| Week Open  | \$343.12     |
| Week Close | \$349.54     |
| Weekly Chg | +1.87%       |
| 52-Wk High | \$408.61     |
| 52-Wk Low  | \$235.84     |
| 52-Wk Pos. | 66% of range |
| Market Cap | \$4.27T      |
| Avg Volume | 29,725,180   |

- Watch for follow-through above the \$357.31 Friday intraday high; failure re-tests support at the \$343 breakout pivot and then \$338.50.
- DOJ remedies process and any Search/Chrome divestiture headlines remain the dominant idiosyncratic overhang into late September.
- Google Cloud capacity commentary and Gemini enterprise traction ahead of Q3 print (late October) are the key fundamental catalysts; capex trajectory is the swing risk.

Buy | Conviction: 6/10 Constructive price structure and sector-relative strength support a positive bias, but Friday's high-volume reversal at \$357 tempers conviction until the breakout is reclaimed.

MRVL rallied +13.18% to \$244.25, materially outperforming a Technology sector that gained only +1.03% over the 5-day window. The move was front-loaded by a mid-week reversal off the \$215.81 intraweek low (Sep 14 open) with three consecutive up-days on expanding volume, culminating in a 23.5M-share session Sep 18 that broke the stock through \$240 resistance. At 67% of the 52-week range (\$70.69–\$329.88), the tape suggests renewed institutional accumulation tied to AI custom-silicon narrative.

- Sharp reversal from Sep 14 intraweek low of \$215.81 to \$244.25 close (+13.2%), with volume accelerating from 12.7M (Sep 15) to 23.5M (Sep 18), indicating conviction buying rather than short-cover drift.
- Sector-relative outperformance: MRVL +13.2% vs. Technology +1.03% over 5D, signaling stock-specific catalyst likely tied to AI ASIC/custom-silicon demand read-throughs (hyperscaler capex commentary and peer datapoints).
- Technical breakout above the \$236–\$240 shelf on Sep 17–18 opened path toward mid-\$250s with no overhead supply until prior swing highs.

Multiple filings were submitted Sep 15 and Sep 18 without disclosed form types in the source; absent specifics, we flag these for review but do not adjust thesis inputs. If these include Form 4 insider activity or an 8-K, they warrant follow-up given the price action's timing.

1-month price performance vs SPY (shaded = current week)

|            |              |
|------------|--------------|
| Week Open  | \$215.81     |
| Week Close | \$244.25     |
| Weekly Chg | +13.18%      |
| 52-Wk High | \$329.88     |
| 52-Wk Low  | \$70.69      |
| 52-Wk Pos. | 67% of range |
| Market Cap | \$219.51B    |
| Avg Volume | 25,672,392   |

- Monitor hyperscaler (AMZN/GOOG/META/MSFT) AI capex commentary and any custom-silicon/Trainium-related datapoints that directly bear on Marvell's ASIC ramp trajectory into FY27.
- Key technical levels: support at \$236 (breakout retest) then \$229; resistance at prior swing highs — a hold above \$240 keeps the bullish structure intact.
- Risk/opportunity: optical/DSP competitive dynamics (vs. AVGO) and enterprise networking recovery cadence remain the two-sided swing factors; incremental ASIC design-win disclosures would be the next asymmetric catalyst.

Buy | Conviction: 7/10 The +13% weekly move on expanding volume and decisive sector outperformance reflects strengthening conviction in Marvell's AI custom-silicon franchise, though the stock's position at 67% of range and unverified filings temper aggressive sizing.
