AAPL: China Tariff Jitters Trim a Hot Run

WHAT HAPPENED

- AAPL dropped another 1.8% today, making it a 4-day slide from $348 — the whole mega-cap tech group has been under pressure (Tech ETF -7% over 5 days), so this isn't an Apple-specific blowup, it's a sector rotation out of the names that got stretched after earnings.
- The General Counsel sold shares twice in two weeks at $339-$343 — not panic selling, but when the top lawyer is trimming near highs, it usually means the stock had run ahead of fundamentals in the short term.

WHY IT MATTERS

Here's what the tape is telling you: AAPL ran from the low $240s to $351 in a year — an 82% move that put it at the very top of its 52-week range. A 5% pullback after that kind of run is healthy, not alarming. The options flow is interesting though — massive unusual activity at the $330 and $335 strikes with roughly equal call and put size, meaning big money is positioning for a fight exactly at today's price. That tells me traders see $330 as the line in the sand; hold it and the uptrend resumes, lose it and we're looking at $315-320 next. The insider cluster selling plus the Tech sector getting hit worse than the broader market (-7% in 5 days) suggests the "AI mega-cap" trade is cooling — money is rotating into Industrials and Healthcare, which have real policy tailwinds right now.

POLICY & POLITICAL WATCH

The elephant in the room is China. Apple still assembles roughly 80% of iPhones there, and every headline about tariff escalation or export controls hits AAPL's margins directly — a 10% tariff on finished electronics would cost them billions before any India/Vietnam shift can absorb it. Watch two things this month: (1) any Treasury or USTR announcement on the Phase 2 China tariff review, and (2) the DOJ antitrust case on the App Store, where a loss could force Apple to open up payments and cost them an estimated $15-20B in high-margin services revenue. On the positive side, the CHIPS Act money flowing to TSMC Arizona benefits Apple directly since they're the anchor customer for those fabs.

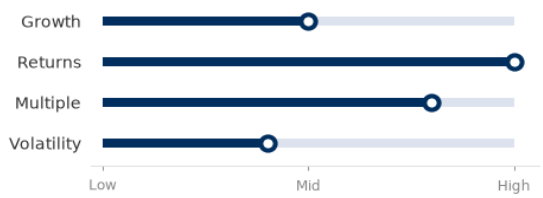

IS IT EXPENSIVE?

At $332, you're paying about 42x forward earnings — meaning $42 for every $1 of profit Apple makes next year. That's expensive historically (Apple traded at 15-20x for most of the 2010s) and expensive versus the S&P at ~22x. The bull case says it's justified because Services is now ~25% of revenue at 70% margins and the installed base keeps compounding; the bear case says you're paying a growth multiple for a company growing revenue 5-7%. I lean toward "fairly valued, not cheap" — you need the AI iPhone cycle to actually drive upgrades to justify today's price.

Key Data

Price (USD)	**$332.13**

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	**$350.00**	$335.00	**$315.00**
6 Months	**$380.00**	$350.00	**$290.00**
1 Year	**$410.00**	$365.00	**$275.00**
2 Years	**$475.00**	$400.00	**$260.00**
5 Years	**$625.00**	$500.00	**$300.00**
10 Years	**$900.00**	$700.00	**$350.00**

WHAT'S MOVING IN THE SECTOR

HEATING UP: Industrials (+2.3% over 5 days) is quietly winning as infrastructure and defense spending flows accelerate. Healthcare is also catching a bid as money rotates to defensive growth.

COOLING OFF: Technology (-7% in 5 days) is taking a breather after a monster run — valuations got stretched and the AI capex narrative is being questioned as hyperscaler spending gets scrutinized.

ROTATION WATCH: Classic late-cycle rotation — money leaving crowded mega-cap tech and moving into industrials, healthcare, and defensive sectors. That's a headwind for AAPL in the near term even if nothing is wrong with the business.

RELATED PLAY: If you want Apple exposure without the China risk, look at the Services ecosystem beneficiaries — payment processors, app economy plays, and chip designers like AVGO or QCOM that get paid whether iPhone units are up or down.

WHO'S WINNING IN THIS SPACE?

- CAT (Caterpillar): Industrial names catching a bid on infrastructure spending and reshoring tailwinds.
- LLY (Eli Lilly): Healthcare mega-caps grinding higher as defensive growth comes back in vogue.

AAPL CONTEXT: AAPL is lagging the market this week but it's lagging from a position of strength — still at 82% of its 52-week range. The relative weakness is a rotation story, not a fundamentals story. If Tech stabilizes, Apple leads the bounce; if the rotation continues, it's dead money for a few weeks.

WHAT I'D DO WITH THIS STOCK

6/10 Conviction Score

CONVICTION: 6/10 — Great company, fine business, but the stock is priced for perfection right at a moment when the macro setup (tariffs, rotation, insider selling) argues for patience.

POSITION SIZE: 4-6% as a core holding — Apple belongs in almost every long-term portfolio, but I wouldn't be adding aggressively here.

ENTRY POINTS: $310-320 on any tariff headline scare or broader tech pullback. If it breaks $330 convincingly, wait for $315 before adding.

TIME HORIZON: 12-24 months — the catalyst is the AI iPhone upgrade cycle actually showing up in unit sales, which we'll know by mid-2026.

WHEN TO BAIL: iPhone revenue down >8% YoY, a DOJ App Store loss that forces structural changes, or a serious China manufacturing disruption.

HEDGING: Simple approach — buy a put option 10% below current price as insurance (costs ~1-2% of your position but caps your downside), or just trim 20% of the position here and rebuy lower.
