SPCX: Space ETF Steadies as Policy Tailwinds Build

WHAT HAPPENED

- SPCX basically did nothing today (+1%) but that's actually the story — after that wild Tuesday spike to $159 and Wednesday crash to $144 (a 9% swing in 24 hours), the fact that it's stabilizing around $148-149 means buyers showed up to defend the level. That matters because it suggests last week's volatility was a one-off headline event, not the start of a breakdown.
- Volume dropped off hard today (86M vs 220M on the spike day) — translation: the panic sellers and FOMO buyers are gone, and we're back to normal trading. That's usually when the real trend reasserts itself.

WHY IT MATTERS

Here's what I'm reading into this: the options flow is screaming bullish — a put/call ratio of 0.61 (meaning way more people betting UP than DOWN) plus three massive unusual call buys at $146-150 strikes expiring this month. Someone with real money thinks SPCX pushes higher into month-end. Connect that to the backdrop: we're in a political environment where space is treated as critical national infrastructure — the Space Force budget keeps growing, the FCC is fast-tracking satellite spectrum approvals, and commercial launch cadence is at record highs. The stock sitting at only 37% of its 52-week range ($105-$226) while fundamentals strengthen is the setup for a re-rate higher, not lower.

POLICY & POLITICAL WATCH

The big one to watch: the FY2027 defense authorization is working through Congress right now, and the Space Force line item is reportedly getting a boost — if that clears, it's a direct funnel of cash to SPCX holdings like launch providers and satellite makers. Also keep an eye on the FCC's ongoing spectrum allocation decisions for low-earth-orbit satellite constellations — friendlier rulings mean more revenue runway for the broadband-from-space names in this ETF. The one headwind: export controls (ITAR rules that restrict selling space tech abroad) are getting tighter under the current admin, which could cap international revenue for US-listed space companies.

IS IT EXPENSIVE?

For an ETF, valuation is really about the weighted multiples of the basket — and space names on average trade at 6-8x sales (meaning investors pay $6-8 for every $1 of revenue these companies generate), which is pricey vs the broader market at ~2.5x but cheaper than pure-play AI names at 15x+. Given the sector's revenue is growing 20-30% a year on average, that premium is defensible. SPCX trading at 37% of its 52-week range feels like the market is underpricing the policy tailwind — this isn't a bubble, it's a sector catching its breath.

SPCX — Procure Space ETF | October 26, 2026

PRICE OUTLOOK — SCENARIO TARGETS BY TIMEFRAME

TIMEFRAME	BULL CASE	BASE CASE	BEAR CASE
1 Month	**$165.00**	$152.00	**$138.00**
6 Months	**$185.00**	$160.00	**$125.00**
1 Year	**$210.00**	$175.00	**$115.00**
2 Years	**$260.00**	$200.00	**$100.00**
5 Years	**$400.00**	$275.00	**$90.00**
10 Years	**$650.00**	$400.00	**$80.00**

WHAT'S MOVING IN THE SECTOR

HEATING UP: Technology (+1.93%) and Industrials (+1.49%) led today — both directly feed SPCX since space is literally industrial-tech. The Tech bid tells me risk-on is back; the Industrials bid tells me the defense/aerospace trade is working.

COOLING OFF: Energy and Materials are lagging on a 1-day basis despite being up on the 5-day — classic late-cycle rotation out of commodities into growth.

ROTATION WATCH: Money is flowing from defensive sectors into growth-tech-industrials — exactly the sweet spot SPCX sits in. When Tech AND Industrials both rally together, space ETFs historically outperform.

RELATED PLAY: If SPCX runs, the picks-and-shovels names benefit too — think specialty chip makers for satellites and ground-station REITs that lease infrastructure to space operators.

WHO'S WINNING IN THIS SPACE?

- RKLB (Rocket Lab): Launch cadence hitting records and winning Space Force contracts — pure beneficiary of defense space spending.
- IRDM (Iridium): Satellite comms play with sticky government revenue — defensive way to play the theme.

SPCX CONTEXT: SPCX is lagging its biggest holdings right now, which is actually bullish — ETFs tend to catch up when the underlying names run first. If the component stocks keep working, SPCX mechanically has to follow.

WHAT I'D DO WITH THIS STOCK

6/10 Conviction Score

CONVICTION: 6/10 — I like the setup but it's an ETF, so you're buying a theme not a single catalyst. Cautiously optimistic.

POSITION SIZE: 2-4% of portfolio — ETF diversification means you can size it bigger than a single space stock, but the sector volatility still demands respect.

ENTRY POINTS: Add on dips to $140-145. Last week showed us the $144 level has buyers. Below $138 means something broke in the thesis.

TIME HORIZON: 12-24 months — the catalyst I'm waiting on is the FY2027 defense bill final passage and the next commercial contract cycle.

WHEN TO BAIL: Below $130 on heavy volume, or if the defense budget gets gutted in Congressional negotiations.

HEDGING: Easiest hedge is just keeping the position smaller — but if you want protection, buy puts (basically insurance that pays off if the stock drops) around the $140 level for 3-6 months out.
