PLTR: Rule of 40 at 158%, But Insiders Keep Selling

WHAT HAPPENED

- Stock dipped 1.6% to $168.81 even though the Zacks piece highlighted PLTR's "Rule of 40" score hitting 158% — Rule of 40 means revenue growth % plus profit margin %, and anything above 40 is considered elite. PLTR is nearly 4x that, which is genuinely absurd for a company this size. So why is the stock down? Cathie Wood's ARK was flagged as SELLING Palantir to buy CoreWeave — that's a vote of no-confidence from one of the loudest AI bulls on the Street, and it matters for sentiment.
- Volume is drying up (9.8M vs 23.8M four days ago) — that usually means conviction is leaking out of the move, not that sellers are aggressive. Combined with the insider cluster-selling (three director sales in October + November at $186-$195), it looks like smart money is trimming into strength.

WHY IT MATTERS

Here's the tension: the business is firing on all cylinders (Rule of 40 at 158% is historically rare), but the stock is priced like it has to keep doing that forever. When ARK rotates out and insiders sell in clusters near highs, that's the market telling you the easy money has been made at these levels. The near-term setup is actually interesting though — options flow is bullish with unusual call buying at $167.5 and $172.5 strikes expiring this month, meaning traders are betting on a bounce back above $172 in the next two weeks. The bigger picture: PLTR is becoming the "default" AI operating system for the US government, and with the Trump administration's push to consolidate federal AI procurement, that moat is widening — but at $407B market cap, you're paying for a lot of that future already.

POLICY & POLITICAL WATCH

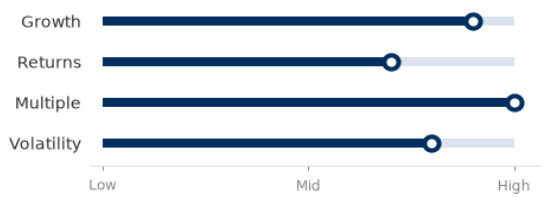

The key policy tailwind right now is the FY2027 defense appropriations bill working through Congress, which includes expanded funding for the Army's TITAN program and Next-Gen Command & Control — both are Palantir-anchored contracts. Separately, the Trump administration's executive order from earlier this year directing federal agencies to standardize on "American AI stacks" is a direct moat-widener for PLTR against foreign competitors and even some commercial rivals. Watch for any noise around the AI export control rules being renegotiated — PLTR's international commercial business (especially Europe/Middle East) is a growth engine, and tighter export rules could clip that wing.

IS IT EXPENSIVE?

5 Years	**$500.00**	$300.00	**$85.00**
10 Years	**$900.00**	$450.00	**$70.00**

WHAT'S MOVING IN THE SECTOR

HEATING UP: Consumer Staples (+2.21% 5D) and Energy (+4.93% 5D) — this is a defensive rotation, meaning money is moving AWAY from high-beta tech into safer ground. Energy strength likely reflects geopolitical premium and continued fossil fuel policy support under the current admin.

COOLING OFF: High-multiple software and AI names broadly — the Accenture $84.5B deal headline suggests enterprise AI budgets are flowing to integrators and services, not just pure-play software, which is a subtle headwind for PLTR's commercial story.

ROTATION WATCH: Defensive sectors leading while AI names consolidate tells me the market is nervous about tech valuations going into year-end. That's a near-term headwind for PLTR specifically because it's the poster child for expensive AI.

RELATED PLAY: If you believe the government AI thesis, the second-order winners are the data center and power infrastructure names (VRT, GEV, CEG) — they get paid regardless of which AI software company wins.

WHO'S WINNING IN THIS SPACE?

- ACN (Accenture): Landed the $84.5B in deal flow mentioned in the news — enterprise AI integration is where the money is actually being spent right now
- ANET (Arista Networks): Benefiting from the AI infrastructure buildout, less valuation risk than pure software plays

PLTR CONTEXT: PLTR is middle-of-the-pack among AI names today — not leading the rally, not getting crushed. Trading at 59% of its 52-week range tells you the easy upside from the summer breakout is gone, and it needs a new catalyst (earnings beat, major contract, policy win) to break out of this $155-$185 range it's been stuck in.

WHAT I'D DO WITH THIS STOCK

6/10 Conviction Score

Position Size: 2-4% of portfolio

Entry Points: $150-160 on pullbacks

Time Horizon: 12-24 months

Thesis Invalidation: Revenue growth decelerates below 30% or major government contract loss

Hedging: Buy puts or pair with short position in a richer AI software name
