WEEKLY MACRO & SECTOR INTELLIGENCE

- Belly of the curve led the selloff with 5Y +4.3bp to 4.55% vs 10Y +2.6bp to 4.78%, flattening 5s10s to just 23bp as bills held near 3.76%. VIX compressed to 14.53 and gold slipped 1.65 — a classic "hawkish repricing without risk-off" tape, signaling markets are pulling forward Fed patience and raising the discount-rate bar for long-duration equities.
- Energy dominated (+2.20% W/W, +11.78% M/M) on sustained crude strength and capex reflation; with real yields firming and gold softening, the rotation into hard-asset cyclicals has legs into next week barring an OPEC surprise.
- Consumer Discretionary was worst (-1.96% W/W, -3.14% M/M), consistent with higher belly yields pressuring rate-sensitive consumer credit and big-ticket demand; Industrials (-1.06%, -5.95% M/M) corroborates a softening cyclical-ex-energy read.
- Tech eked out +0.86% and held green on the month (+0.74%) despite the yield backup — a notable relative-strength signal. AI/semis and hyperscaler capex narratives absorbed the duration hit, but Comm Svcs (-0.85%) flagged that mega-cap leadership is narrowing to compute/infrastructure names over ad-model platforms. Quantum and high-multiple small-cap AI remain vulnerable if 5Y breaches 4.60%.
- Key risk: NFP Friday. With VIX complacent sub-15 and the curve pricing a hawkish hold, an upside payroll or wage print pushes 10Y toward 4.85% and forces a factor unwind out of Tech into Energy/Value. Opportunity: a soft print reignites duration and puts AI infrastructure leaders back in pole position — asymmetric setup favors barbell energy cyclicals against quality AI compute names.

AAPL closed the week at \$319.97, essentially flat (+0.12%) versus the prior week's \$319.60, but the tape masked meaningful intraweek volatility with shares rallying to \$328.21 on 9/3 before a sharp -2.51% reversal on 9/4 on elevated 39.5M share volume. The stock continues to trade at 79% of its 52-week range (\$225.95–\$344.57), with Technology sector strength (+0.86% 5D) providing a modest tailwind offset by profit-taking into month-end positioning.

- Late-week reversal: shares gave back ~\$8.24 (-2.51%) on 9/4 after peaking at \$328.21 on 9/3, suggesting distribution near the upper end of the 52-week range ahead of anticipated September product event positioning.
- Sector tailwind supportive but not decisive: Technology +0.86% and Energy leadership (+2.20%) indicated a rotation-friendly tape, though AAPL underperformed the sector on the week.
- Volume profile skewed to the sell-side: highest-volume session (9/1, 53.2M shares) coincided with a +\$8.15 rally, but subsequent sessions failed to extend, indicating exhausted demand at \$325–\$328.

Six SEC filings were flagged this week without disclosed form types or content; absent specifics, we treat these as routine (likely Form 4 insider transactions or 8-K administrative items) and note the thesis is unchanged pending detailed review.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$319.60
Week Close	\$319.97
Weekly Chg	+0.12%
52-Wk High	\$344.57
52-Wk Low	\$225.95
52-Wk Pos.	79% of range
Market Cap	\$4.67T
Avg Volume	54,154,936

- September product event window: watch for iPhone launch timing and pricing commentary, historically a key catalyst for services/hardware ASP guidance revisions.
- Technical levels: \$328 acts as near-term resistance (9/3 high); support at \$316.85 (8/31 close) — a breach opens downside to the \$310 area.
- China demand and FX exposure remain the primary fundamental risks; watch for read-throughs from supply chain checks and any dollar-strength commentary into fiscal Q4 print.

Neutral | Conviction: 6/10 Flat weekly performance with a bearish reversal off \$328 resistance argues for patience ahead of the September event catalyst; risk/reward at 79% of 52-week range is balanced.

PLTR fell 5.51% to \$174.33 despite Technology sector strength (+0.86% 5D), with the week defined by a sharp Sep-2 selloff (close \$169.46, -5.8% intraday from open \$176.99 on 39.9M shares) that broke the \$180 support established late August. Shares are now ~16% off the 52-week high of \$207.52 but remain at 67% of the annual range, suggesting profit-taking on an extended name rather than a fundamental re-rating.

- Sep-2 capitulation candle (open \$176.99 → close \$169.46, ~40M volume) drove the bulk of the weekly decline, snapping the prior 3-day range of \$185.93–\$186.38.
- Failed recovery attempt on Sep-3 (intraday reversal to close \$182.53) was rejected the following session (Sep-4 close \$174.33), confirming \$182–\$185 as new near-term resistance.
- Sector rotation dynamics muted: Energy (+2.20%) and Utilities (+0.82%) led, indicating a defensive/cyclical bid that bypassed high-multiple software names like PLTR.

Multiple filings hit on 8/31 and 9/1 without disclosed content in this feed; given the timing coincident with the Sep-2 drawdown, we flag these as requiring follow-up review, though absent detail we assume routine Section 16 insider Form 4s rather than 8-K material events.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$184.49
Week Close	\$174.33
Weekly Chg	-5.51%
52-Wk High	\$207.52
52-Wk Low	\$106.37
52-Wk Pos.	67% of range
Market Cap	\$418.93B
Avg Volume	40,826,409

- Watch the \$169.46 Sep-2 low as key support; a breach opens downside toward the \$160 psychological level and the 50-day area.
- Reclaim of \$182.53 (Sep-3 close) needed to neutralize the bearish weekly structure; above \$186.38 restores the uptrend.
- Government/commercial AIP contract announcements and any Q3 pre-announcement commentary remain the primary fundamental catalyst; insider selling cadence via Form 4s bears monitoring given elevated valuation.

Neutral | Conviction: 6/10 Technical damage from the Sep-2 breakdown and unresolved filing activity warrant a pause despite intact long-term AI/defense tailwinds; we await either a support hold at \$169 or clarity on the week's filings before adding conviction.

AMZN closed the week at \$258.51, down 2.02% from the prior \$263.83, retreating from a mid-week spike to \$266.43 on 8/28 as shares gave back gains across three consecutive down sessions before stabilizing near \$258–259. The pullback occurred despite modest Technology sector strength (+0.86% 5D), suggesting stock-specific profit-taking after the name traded to 69% of its 52-week range (\$196.0–\$287.2).

- Sharp reversal from 8/28's \$266.43 close (+3.97% single-day on elevated 49.5M volume) into a three-day slide bottoming at \$254.92 on 9/01, indicating institutional distribution near local highs.
- Volume tapered meaningfully into the back half of the week (24.0M–30.7M shares vs. 46–49M mid-week), consistent with exhaustion of selling pressure and a base-building attempt in the \$254–\$259 zone.
- Sector backdrop was mixed: Technology (+0.86%) provided modest lift, but Comm. Svcs weakness (-0.85%) weighed on adjacent mega-cap sentiment, limiting follow-through.

Multiple SEC filings were submitted between 8/31 and 9/04, but form types and contents were not disclosed in the source feed; pending review, we treat these as routine (likely Form 4 insider or 8-K administrative) with no thesis impact until specifics are confirmed.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$263.83
Week Close	\$258.51
Weekly Chg	-2.02%
52-Wk High	\$287.20
52-Wk Low	\$196.00
52-Wk Pos.	69% of range
Market Cap	\$2.79T
Avg Volume	47,826,544

- Watch AWS commentary and any pre-announcement chatter into Q3 print; hyperscaler capex trajectory and AI monetization remain the primary valuation lever.
- Key technical levels: support at \$254.92 (weekly low) and \$250 psychological; resistance at \$266.43 (weekly high) then 52-week high of \$287.2.
- Risk: consumer discretionary softness heading into holiday guide-setting; opportunity: continued Energy sector strength (+2.20%) signals resilient macro that supports retail throughput and ad spend.

Buy | Conviction: 7/10 Despite the 2% weekly drawdown, price action shows constructive basing above \$254 with declining sell-volume, and the AWS/ads/retail earnings power thesis remains intact with the stock still 10% below 52-week highs.

SPCX advanced +5.62% to close the week at \$147.95, with the bulk of gains concentrated in Wednesday's 09/03 breakout session (\$141.36 open → \$149.74 close) on outsized volume of 121.3M shares — roughly 2.3x the week's average. Despite the rally, the ETF remains at just 36% of its 52-week range (\$104.83–\$225.64), suggesting the move is a technical bounce rather than a structural re-rating, aided modestly by Tech (+0.86%) and Energy (+2.20%) sector tailwinds relevant to satellite/launch constituents.

- 09/03 volume surge to 121.3M shares (>2x weekly average) coincided with a +5.93% single-day gain, indicating institutional accumulation or a basket rebalance flow into space-exposed names
- Constructive sector backdrop with Energy (+2.20%) and Technology (+0.86%) leading, supportive of SPCX's dual exposure to satellite communications and launch/aerospace hardware
- Follow-through weakness on 09/04 (close \$147.95 vs. \$149.74 prior) suggests some profit-taking after the spike, but the week held above the \$140 pivot

No material SEC filings this week. The thesis is unchanged.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$140.08
Week Close	\$147.95
Weekly Chg	+5.62%
52-Wk High	\$225.64
52-Wk Low	\$104.83
52-Wk Pos.	36% of range
Market Cap	\$1.95T
Avg Volume	109,715,547

- Watch for launch-cadence updates and Q3 backlog commentary from top holdings (Iridium, Rocket Lab, Viasat) as pre-earnings positioning begins
- Key technical levels: \$149.74 (09/03 high) as near-term resistance; \$140.08 weekly open as first support — a break below invalidates the bounce
- Concentration risk remains a headwind — SPCX trades at only 36% of 52-week range, and any pullback in mega-cap satellite names or defense budget headlines could reverse this week's gains quickly

Neutral | Conviction: 6/10 The +5.62% weekly gain on strong 09/03 volume is encouraging, but the ETF's position at only 36% of its 52-week range and absence of fundamental catalysts warrant a wait-and-see stance pending confirmation above \$150.

HOOD surged +18.07% to close at \$122.11, driven by a decisive Sept 3 breakout on 51.6M shares (roughly 3x average weekly volume), gapping from \$106.99 to a \$124.72 close. The move followed a mid-week consolidation near the \$103–105 zone and pushed the stock to 65% of its 52-week range (\$63.52–\$153.86), outpacing a flat Financials sector (+0.00% 5D) and modest Tech tailwind (+0.86%).

- Sept 3 volume-driven breakout (51.6M shares, +16.6% intraday close-over-close) suggests an institutional catalyst — likely tied to one of the six filings clustered around 08/31–09/04.
- Prior three sessions (8/28–9/1) saw distribution from \$109.76 down to \$103.51 on elevated volume (16–22M), establishing the \$103 base that fueled the reversal.
- Sector-relative outperformance was stark: HOOD's +18% dwarfed Financials' flat print, indicating idiosyncratic (name-specific) rather than sector-driven action.

Six filings landed in a tight window (four on 08/31, plus 09/01 and 09/04), and the 09/04 filing directly coincides with the breakout — strongly suggestive of a material corporate development (potential 8-K disclosure, insider activity, or business update) that re-rated the equity. Filing form types should be verified before adjusting the thesis.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$103.42
Week Close	\$122.11
Weekly Chg	+18.07%
52-Wk High	\$153.86
52-Wk Low	\$63.52
52-Wk Pos.	65% of range
Market Cap	\$109.79B
Avg Volume	24,568,598

- Monthly operating metrics (funded accounts, AUC, crypto notional volumes) — HOOD typically releases mid-month and will confirm whether August retail engagement supports the re-rating.
- Watch \$122 as new support and \$124.72 (Sept 3 high) as pivot; failure to hold \$118 would signal breakout exhaustion, while a push through \$125 opens path toward 52-wk high of \$153.86.
- Crypto trading volumes and rate-cut expectations remain the twin swing factors — a dovish Fed pivot supports risk-on retail flow, but any crypto drawdown would compress the transaction-revenue narrative.

Buy | Conviction: 6/10 The volume-confirmed breakout and filing cluster support constructive positioning, but conviction is capped pending clarity on the specific 09/04 catalyst and follow-through above \$125.

META advanced +6.78% to close the week at \$616.77, driven by a decisive breakout on September 1 (intraday reversal from \$558.35 open to \$578.54 close) that extended through a gap-up open of \$604.49 on September 3. The move outpaced the broader Communication Services sector (-0.85% 5D), suggesting stock-specific catalysts—likely tied to the cluster of SEC filings dated Aug 31–Sep 4—rather than sector beta. Shares now sit at 36% of the 52-week range (\$520.26–\$790.80), leaving meaningful headroom to prior highs.

- Sharp trend reversal beginning Sept 1: after three choppy sessions near \$571–\$578, the stock rallied ~7.4% over three days on expanding volume (peak 19.7M shares Sept 3 vs. ~15M baseline), signaling institutional accumulation.
- Idiosyncratic strength versus Communication Services (-0.85% 5D) and only modest Tech tailwind (+0.86%), pointing to company-specific catalysts rather than macro drift.
- Cluster of six SEC filings between Aug 31 and Sept 4 coincided precisely with the breakout, suggesting disclosure-driven repricing.

Six filings were submitted across Aug 31–Sept 4 with form types unspecified in the provided data; the timing correlation with the price breakout warrants review of the actual documents (likely 8-K disclosures or insider Form 4s) before adjusting thesis. Absent form-type detail, we flag this as a monitor item rather than a thesis change.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$577.63
Week Close	\$616.77
Weekly Chg	+6.78%
52-Wk High	\$790.80
52-Wk Low	\$520.26
52-Wk Pos.	36% of range
Market Cap	\$1.57T
Avg Volume	17,851,201

- Watch for follow-through above \$620 resistance; a clean break opens a path toward the \$650 psychological level and eventually the 52-week high of \$790.80.
- Monitor volume confirmation—if daily turnover slips back below 14M shares on any pullback, the breakout risks failing back into the \$577–\$592 congestion zone.
- Ad-spend commentary from peers and any AI capex/monetization updates (Reels, Llama, Meta AI) remain the key fundamental swing factors into Q3 print season.

Buy | Conviction: 7/10 Technical breakout on expanding volume and outperformance versus a negative sector backdrop justify constructive positioning, tempered by unresolved clarity on the filings cluster.

MU advanced +9.15% to close the week at \$1,016.59, breaking above the psychologically significant \$1,000 level on Friday's session (open \$971.34 → close \$1,016.59) on outsized volume of 35.1M shares, roughly 45% above the week's average. The move places shares at 79% of the 52-week range (\$128.4–\$1,255.0), supported by a constructive Technology sector tape (+0.86% 5D) and continued HBM/AI memory demand narrative ahead of the company's fiscal Q4 print.

- Friday's +4.7% breakout on 35.1M shares was the decisive driver, reclaiming \$1,000 and finishing at the week's high — a bullish technical signal following mid-week consolidation between \$932–\$958.
- Constructive rotation into semis within a positive Technology sector print (+0.86% 5D) alongside AI/HBM demand tailwinds heading into MU's upcoming FQ4 earnings window.
- Higher-lows structure across the week (Aug 28 close \$932.86 → Sep 2 close \$956.08 → Sep 4 close \$1,016.59) reflects persistent accumulation rather than momentum-only chasing.

Multiple filings were logged (Aug 31 – Sep 2) but without disclosed form types or content; absent specifics, we treat these as administrative and thesis-neutral pending review of the actual documents.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$931.39
Week Close	\$1016.59
Weekly Chg	+9.15%
52-Wk High	\$1255.00
52-Wk Low	\$128.40
52-Wk Pos.	79% of range
Market Cap	\$1.15T
Avg Volume	43,215,706

- Fiscal Q4 2026 earnings and HBM3E/HBM4 pricing commentary are the near-term catalyst — guidance on DRAM/NAND ASPs and hyperscaler HBM allocations will drive the next leg.
- Watch \$1,000 as new support; a failure to hold reopens \$958 (prior week pivot), while a hold sets up a run at prior-cycle highs toward the \$1,255 52-week peak.
- Key risk: any softening in enterprise SSD or PC/mobile DRAM demand commentary from peers could pressure the AI-memory premium currently embedded in the multiple.

Buy | Conviction: 7/10 Price action, volume confirmation, and HBM cycle positioning support a constructive stance into the earnings catalyst, though the 79% 52-week range positioning limits margin of safety.

TSLA closed the week at \$354.08, up +1.98% W/W, with pronounced intraweek volatility including a +5.5% surge on 8/31 to \$367.95 on elevated volume (61.7M) and a sharp -3.4% reversal on 9/4 (64.8M shares) that unwound Wednesday's \$376.37 peak. The stock remains stuck at just 28% of its 52-week range (\$297.38–\$498.83), reflecting continued indecision despite modest tailwinds from Technology (+0.86%) and Energy (+2.20%) sector strength.

- Elevated volume spikes on 8/31 (61.7M) and 9/3 (63.6M) suggest institutional repositioning around undisclosed catalysts, with the stock briefly reclaiming \$376 before failing to hold
- Friday's -6.2% peak-to-close reversal (from \$376.37 to \$354.08 over two sessions) on 64.8M share volume points to profit-taking and rejection at near-term resistance
- Modest sector tailwind from Tech (+0.86%) provided limited support; TSLA outperformed the sector but underperformed Energy (+2.20%)

Multiple SEC filings were logged (four on 8/31, plus 9/1 and 9/4) but form types and content were not disclosed in the feed; given the clustering around the 8/31 volume spike, these warrant review for potential insider transactions (Form 4) or material disclosures (8-K) before adjusting the thesis.

[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$347.21
Week Close	\$354.08
Weekly Chg	+1.98%
52-Wk High	\$498.83
52-Wk Low	\$297.38
52-Wk Pos.	28% of range
Market Cap	\$1.40T
Avg Volume	41,827,363

- Monthly China delivery data (CPCA/CAAM) expected early next week — key read on Q3 volume trajectory into the September quarter-end
- Watch \$347 (weekly open/support) as downside pivot and \$376 (weekly high) as resistance; a break below \$347 opens retest of the \$297 52-week low
- Robotaxi/FSD unlock cadence and Q3 delivery preannouncement risk remain binary catalysts; margin compression from ongoing price competition is the primary fundamental overhang

Neutral | Conviction: 6/10 Weekly gain masks distribution behavior (Friday reversal on highest volume of the week) and position at just 28% of 52-week range signals unresolved technical damage; awaiting Q3 delivery clarity before shifting bias.

NVDA advanced +5.25% to close at \$230.36, recovering from an intraweek trough of \$217.44 (Sept 1) to finish within 3% of the 52-week high of \$236.54. The rally was underpinned by broad Technology sector strength (+0.86% 5D) and a decisive Wed–Fri push (+5.94% over three sessions) on expanding volume into the \$230s, signaling institutional accumulation ahead of AI infrastructure catalysts.

- Late-week momentum reversal: after the Aug 28 gap-down to \$217.55 (-4.31%), buyers defended the \$216–\$218 zone across three sessions before a \$6.63 rip on Sept 2–3, reclaiming the \$228 resistance shelf.
- Sector tailwind: Technology posted +0.86% on the week while Energy (+2.20%) and Utilities (+0.82%) also gained, reflecting a risk-on, AI-power-thematic bid that lifted GPU/hyperscaler-linked names.
- Volume signature bullish: down-day volumes (298M on 8/27, 195M on 8/28) gave way to lighter, orderly distribution before demand returned on 134–157M share up-days, indicating supply exhaustion near \$217.

Multiple filings were submitted between 8/31 and 9/2 but form types and content are not disclosed in the provided data; absent specifics, we treat these as routine and note the thesis is unchanged pending review of the actual documents.

[Thu Jan 01] :

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

1-month price performance vs SPY (shaded = current week)

Week Open	\$218.87
Week Close	\$230.36
Weekly Chg	+5.25%
52-Wk High	\$236.54
52-Wk Low	\$164.27
52-Wk Pos.	91% of range
Market Cap	\$5.56T
Avg Volume	135,559,144

- Watch for a breakout test of the 52-week high at \$236.54; a weekly close above would open a measured-move target in the \$245–\$250 range.
- Key support sits at \$217–\$218 (this week's double-bottom); a break would invalidate the near-term bullish structure and expose the 50-day zone.
- Monitor hyperscaler capex commentary and any Blackwell/Rubin supply-chain updates — incremental data-center order visibility remains the dominant fundamental driver into the fiscal Q3 print.

Buy | Conviction: 7/10 Constructive price action off defended support, expanding volume on up-days, and proximity to 52-week highs justify a Buy, though we hold conviction at 7 pending clarity on the week's filings and confirmation of a breakout above \$236.54.

GOOGL declined 1.50% to \$338.46, underperforming Technology (+0.86%) and tracking closer to weaker Communication Services (-0.85%) sector action. Shares peaked intraweek at \$346.37 on 8/28 before rolling over to a \$334.80 low on 9/01, with the mid-week reversal absorbing elevated volume of 33.5M shares on 8/31. The stock holds at 60% of its 52-week range (\$233.23–\$408.61), reflecting consolidation after the summer rally.

- Sector rotation headwind: Comm. Services was the weakest S&P sector (-0.85% 5D), pressuring GOOGL despite broader Tech strength (+0.86%).
- Distribution signature on 8/31: highest-volume session of the week (33.5M) coincided with a \$346.37 → \$339.13 reversal, signaling institutional profit-taking after the 8/28 spike.
- Mid-week \$334.80 low on 9/01 held as intraweek support before a modest recovery bounce to \$342.26 on 9/03, though sellers reasserted into Friday's close.

Multiple SEC filings were logged between 8/31 and 9/02 without disclosed form types or content; absent specifics, we treat these as administrative and leave the fundamental thesis unchanged pending detail review.

[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :
[Thu Jan 01] :

Week Open	\$343.61
Week Close	\$338.46
Weekly Chg	-1.50%
52-Wk High	\$408.61
52-Wk Low	\$233.23
52-Wk Pos.	60% of range
Market Cap	\$4.14T
Avg Volume	30,102,998

- Monitor DOJ remedies proceedings and any incremental commentary on Search/ad-tech structural remedies, the dominant overhang on the multiple.
- Technical: \$334.80 is the near-term support pivot; a break targets the \$325 area, while reclaim of \$346 reopens the \$355+ zone.
- Watch Cloud/AI capex commentary and hyperscaler channel data — GOOGL's GCP growth trajectory and TPU/Gemini traction remain the key upside asymmetry vs. the Comm. Svcs sector drag.

Buy | Conviction: 7/10 The 1.5% pullback on sector-driven distribution is orderly consolidation within an uptrend; risk/reward remains favorable given AI monetization optionality and a still-mid-range 52-week position.

MRVL closed the week +3.35% at \$223.55 despite significant intraweek volatility, with shares gapping down from \$253.44 (8/27 open) to a low close of \$206.48 (9/02) before recovering ~8% over the final two sessions. The early-week drawdown on elevated volume (48.9M shares 8/28) suggests a post-earnings/guidance reset, while the Friday reversal to \$223.55 tracked broader Technology sector strength (+0.86% 5D) and renewed AI custom-silicon bid.

- Sharp early-week de-rating: shares fell from \$241.45 (8/27) to \$206.48 (9/02), a ~15% peak-to-trough drawdown on outsized volume (41M and 49M shares on 8/27–8/28), consistent with a disappointing print or guidance reaction.
- Late-week mean-reversion rally: 9/03–9/04 saw closes of \$208.83 → \$223.55 (+7.0% in two sessions) on ~40M cumulative shares, reflecting dip-buying into AI/custom ASIC exposure.
- Sector tailwind: Technology +0.86% on the week provided a supportive backdrop, though MRVL's beta amplified idiosyncratic moves well beyond the tape.

Multiple filings hit between 8/31 and 9/02 (likely 10-Q, 8-K earnings, and related Section 16 activity given the timing around the price gap), which coincides with the initial selloff and warrants review for guidance, segment mix (Data Center vs. Enterprise Networking), and any insider transactions that could weigh on sentiment.

1-month price performance vs SPY (shaded = current week)

Week Open	\$216.30
Week Close	\$223.55
Weekly Chg	+3.35%
52-Wk High	\$329.88
52-Wk Low	\$63.07
52-Wk Pos.	60% of range
Market Cap	\$200.91B
Avg Volume	34,843,719

- Watch for sell-side model revisions and analyst day/conference commentary following the guidance reset; AI revenue trajectory into FY27 remains the pivotal narrative.
- Technical levels: \$206 (weekly low) as near-term support; \$241–\$253 gap-fill zone as upside resistance. A hold above the \$220 handle would confirm the reversal.
- Key risk: custom ASIC share dynamics vs. AVGO and hyperscaler in-house silicon; opportunity lies in any confirmation of incremental Amazon Trainium or new hyperscaler socket wins.

Neutral | Conviction: 6/10 The Friday rebound is constructive but the ~15% intraweek drawdown on heavy volume signals a genuine estimate cut; we prefer to see stabilization above \$220 and clarity on AI silicon ramp before adding conviction.
